NEC LASER DETECTOR—TYPE LD-769 and LD-848

This static crossed-field photomultiplier detects low-level laser light, modulated by a signal frequency which switches from DC to microwave. In the static crossed electric and magnetic fields (produced by suitable arrangements of electrodes) and cycloidal electron motion has very small transit-time dispersion. Thus, the photomultiplier delivers flatter and wider frequency response (extending to the microwave region) than the conventional tube. The LD-769 and LD-848 are packaged with a compact, completely shielded permanent magnet. A 50-ohm coaxial output terminal mates with connector type UG-21D/U.

NEED PRINTS NOW? Rotolite DELIVERS

MARK II

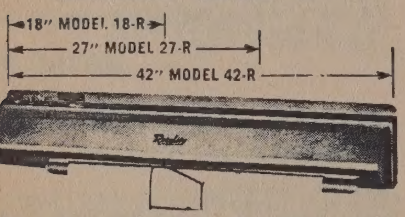
Up to 44" wide
1½¢ per sq. ft.

The new Mark II is just as dependable . . . but prints and develops in one unit. New circuitry gives 100% faster printing speeds than other models; introduces an Auto-Start lamp and reverse switch. The VACU-FLO ammonia system (optional) sends only the vapor into the machine, ***not liquid.*** Eliminates daily handling. Makes sepias, black line and foils without turning them over.

OTHER MODELS

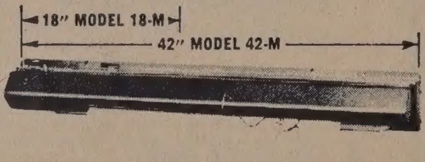
for every drafting room or office needing "Larger Than Letter Size Copies"

ECONOMY MODEL "R"



The most economical Diazo white-printer on the market. Simple to operate, easy to maintain, this machine delivers quality copies the same as machines costing thousands of dollars.

THE EXPEEDITER



Featuring dial control, a fast Hi-Pro lamp and a low price, this machine is so simple a child could turn out beautiful copies, every time.

IDEA

Some large companies have purchased many of these machines (27R only $164.50) for use in branches. Just hang it on the wall . . . prints in seconds!

Rotolite installs anywhere, works immediately, simple, dependable, the utmost in convenience.

PUT THEM WHERE THE ACTION IS — IT PAYS!

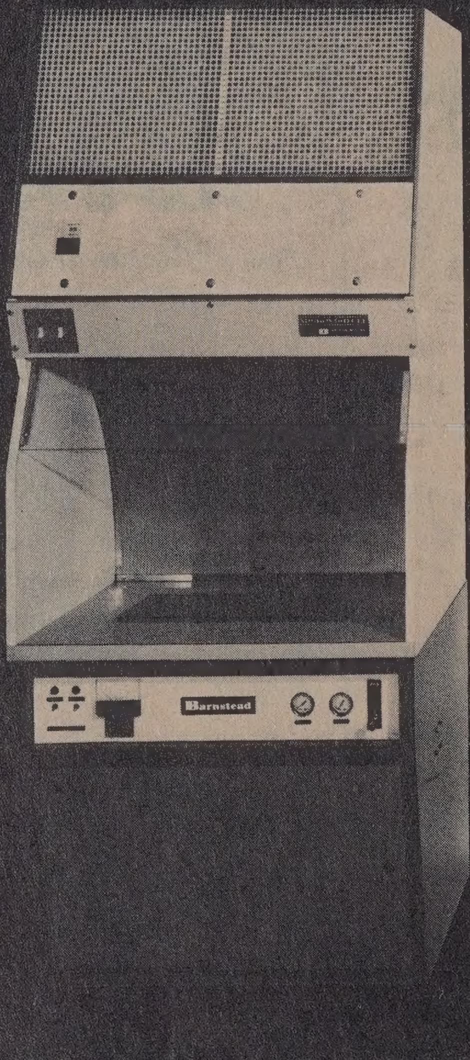
"The Dirty Fighter"

(Our New Ultra-Pure Cleaning System.)



Boy, does it fight dirty. With cascading rinses of ultra-pure hot water pouring over just about any miniaturized component you can name, impurities just don't have a chance. Not even the tiniest ones, down to 0.45 micron, escape the dirty fighter. Available with or without a laminar flow hood, and in two models with flow rates to 50 gph. The dirty fighter is clean-cut, however; steel cabinetry, recessed controls, sliding access doors, and a plastic-coated working surface.
Sure, our cleaning system fights dirty. You wouldn't want it any other way. Write or call for more information. Barnstead Company, 225 Rivermoor Street, Boston, Massachusetts, 02132, (617) 327-1600.

Our new KBM-7 Koldweld® Machine is really fine. It cold welds wire from .0025″ to .0126″ . . . is hand-operated, with no other power required . . . and is easy loading. It butt-welds, to themselves and each other, practically all non-ferrous metals . . . copper, aluminum, nickel, etc. Like all Koldweld Machines, the KBM-7 produces a perfect metallurgical and mechanical butt weld in non-ferrous metals in seconds—with pressure alone. No end preparation is necessary and exact end-to-end alignment is assured. With the KBM-7 joining the Koldweld line, there's now a Koldweld unit designed to butt-weld virtually all sizes of wire and rod stock up to half-inch diameter. LOW
MICROWAVE NOISE?

Model SE-200

WHY NOT *PROVE* IT?

SPECTRA Microwave Noise Measuring Instruments are the only equipments yet devised that can give you the FM and AM noise content of conventional and solid state microwave sources — to accuracies as high as ±1 DB. Proof? Maybe not, but close to it.

SPECTRA-EXCLUSIVES:

- ☐ RF Frequency Ranges: 1.0 Gc/s to 32 Gc/s
- ☐ Self-Calibrating for both AM & FM noise measurements
- ☐ Broad Video Frequency Coverage: 1 Kc/s to 150 Kc/s
- ☐ Residual FM Monitor: 10 cps to 1 Kc/s
- ☐ Dual Bandwidth Spectrum Analyzer: 100 cps and 1 Kc/s
- ☐ High Sensitivity: AM 135 DB below carrier level; FM .0032 cps rms deviation
- ☐ Minimum RF Input Power: 1.5 milliwatts
- ☐ Self-Contained Microwave Spectrum Analyzer
- ☐ Phase-Locked Local Oscillator

NEW MEASUREMENT SERVICE

A custom Noise Measurement Service is now operated by Spectra to provide accurate noise measurements of X-band sources in the frequency range from 8.5 Gc/s to 10.5 Gc/s. Readout: X-Y recordings of FM or AM noise vs. video frequency. Write today for technical data and complete details.

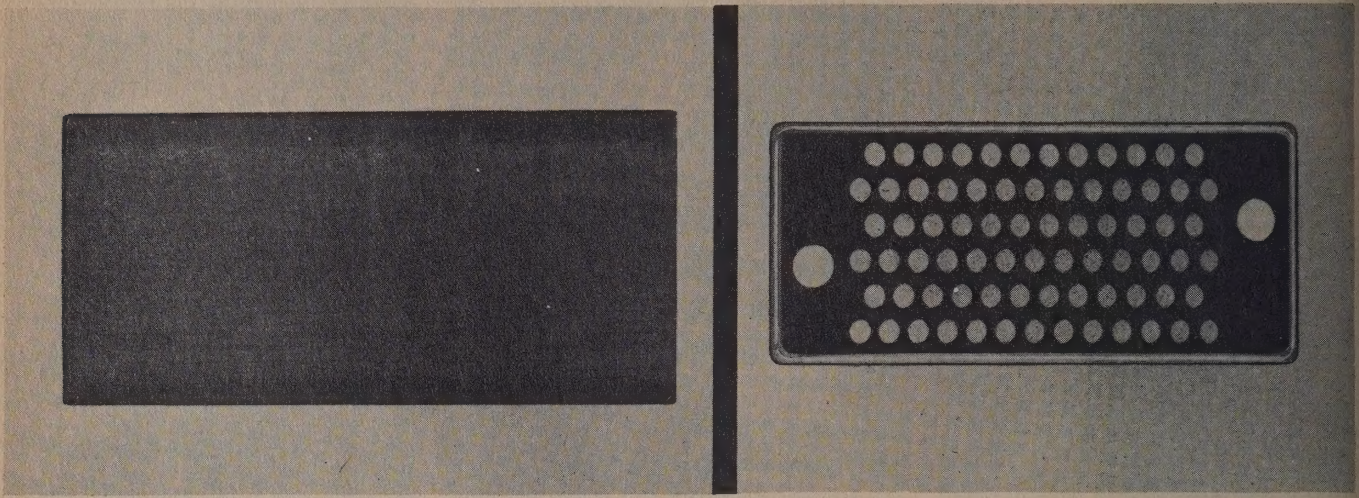
IN .9 OF A SECOND, RICHFIELD CAN TRANSFORM A SOLID METAL MASS INTO A PRECISION PART

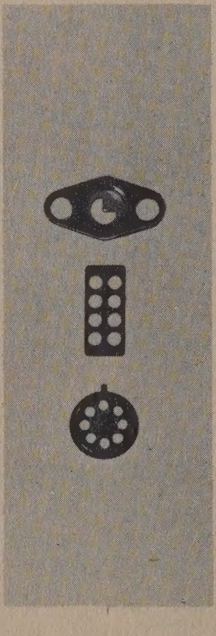


How coining can upgrade your product and lower your costs

The process of coining — the forming of metal by impact and cold displacement — is not a new development in industry. **But** the application of coining to mass production of **close tolerance** components **is radically new** — and Richfield research is responsible.

Today, Richfield's capability in coining offers unlimited design opportunities to engineers and manufacturers of coined bodies and transistor bases for compression hermetic seals and other applications in the electronics field.

Three of the thousands of parts that Richfield has custom designed and produced are illustrated in the center panel. (1. Copper Heat Sink. 2. Micro-miniature .100 grid relay base. 3. 8-hole TO-5 matched or compression seal.) They are coined from cold metal in fractions of a second, yet they offer advantages that are clearly visible: Complex, intricate designs; absolute conformity to close tolerances; extremely flat and parallel body surfaces with shaved holes — prime requisites for superior glass to metal hermetic seals. Only slow and painstaking machining could duplicate these parts — and only at prohibitive cost.



When you need a new component, rely on Richfield to produce it — with greater precision, at lower cost.

Eagle-Picher guarantees dependable supply—ultra-high purity

You're *sure* with Eagle-Picher, unsurpassed source of all these products in ultra-high purity compound and metal form. Over 30 years ago, Eagle-Picher made Gallium metal recovery practical while separating Germanium from Zinc concentrates. And as a result of constant purification and upgrading since that time, Eagle-Picher today, for example, supplies Germanium and Gallium Oxides with *minimum* spectrographic purities of 99.9999% and Germanium and Gallium metals with spectrographic purities over 99.99999%! So Eagle-Picher compounds and metals continue to lead in quality and dependability for the rigid, precise demands of the semiconductor industry.

EAGLE-PICHER COMPOUNDS AND METALS

BORON: Ultra-high purity elemental Boron; Tribromide; Oxide. **CADMIUM:** Ultra-high purity Cadmium Metal; Sulfide, powder, crystal chips, melt and vapor phase crystals; Cadmium Selenide and Cadmium Telluride powder. **GALLIUM:** Metal; Sesquioxide, Trichloride. **GERMANIUM:** First Reduction Metal; Intrinsic Metal; Single Crystals; Dioxide; Tetrachloride; Tetrabromide; Tetraiodide; Monoxide; Diiodide; Sodium Metagermanate; Sodium Heptagermanate. **ZINC:** Metal; Sulfide, powder, crystal chips, melt and vapor phase crystals; Zinc Selenide and Zinc Telluride powders.

DMS 3200

DIGITAL MEASURING SYSTEM
(Fully solid state with IC's)

This all-solid-state precision measurement system offers unlimited expansion capability through plug-in additions, resulting in a specialized instrument for each type of measurement. New plug-ins now broaden the measurement capability of this field-proven unit. Over 10,000 are in use at present.

Scaling controls make possible resolution of up to seven digits on the three-digit display by utilizing the overrange capability of many of the plug-ins, thus providing high resolution and accuracy with minimum investment. Companion devices such as the PR 4900 Digital Printer and 1050 Digital Set-Point Controller further extend the utility of the DMS 3200 System.

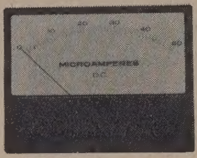
API indicating and controlling instruments

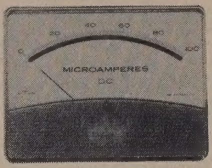
Panel meters, meter-relays, controllers

DC meters available from stock include 15 Panelist and Stylist models with standard 1% tracking and frictionless taut-band construction in 20 to 100 μa ranges, at no extra charge.

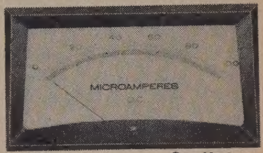
Other models available in all standard AC and DC ranges. Taut-band standard between 0 to 3 and 0 to 100 μa; 0 to 3 and 0 to 25 mv. Taut-band is special in ranges above 100 μa. Most taut-band DC meters can be calibrated for 0.5% tracking, 1% accuracy, or 0.5% accuracy. Square and rectangular models range from 2¼″ to 10″ in width.



Panelist—black phenolic, three models.

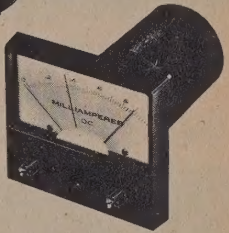


Panelist—clear acrylic, six models.



Stylist—recessed-mounting, four models.

Compack IV—edge-reading



Compack IV—integral controller.

Contactless (optical) meter-relays are offered in Panelist, Stylist and edge-reading styles. Adjustable single or double set points, reliable control action at set point, continuous indication of input signal, operation from small (unamplified) signals.

The Ultimeter, while not a meter-relay, allows circuit designers to combine signal indication and easy set point adjustment with the latest integrated circuit techniques at lowest possible cost. Contains 1% linear meter movement and 0.5% linear potentiometer, both precisely calibrated to the meter dial.

Compack IV controllers are five times more sensitive and considerably faster than comparable instruments previously available for On/Off control. Standard full-scale ranges as sensitive as 0 to 1 μa and 0 to 1 mv.

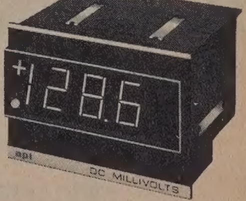
Control is independent of meter movement, triggering electronically when signal strength equals set point value. Other features are easy set point adjustment, standard 1% accuracy, small space requirement, simple installation. Ranges up to 0 to 50 amperes DC and 0 to 500 volts DC.

Also available in edge-reading model.

Digital products

Model 4301 is a 3-digit DPM that requires only 1½″ behind the panel when its exclusive detachable power supply is remotely mounted.

Standard accuracy ±0.1% of reading, ±1 digit. Features include print command, display-hold, 30% overrange, auto-polarity, BCD output. Ranges are 0 to 130.0 mv to 0 to 1000 volts DC, and 0 to 13.00 μa to 0 to 130.0 ma DC. Set points available.



Model 4301 digital panel meter.

Model 4304 has 4 digits for a display to 1999. Standard ranges are 0 to 199.9 mv to 0 to 199.9 volts DC, and 0 to 19.99 μa to 0 to 199.9 ma DC.

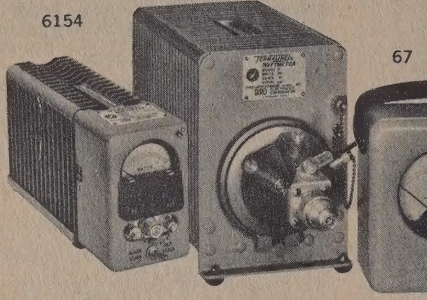
TERMALINE®

RF ABSORPTION WATTMETERS



TERMALINE®

RF ABSORPTION WATTMETERS

Are direct reading instruments for absorbing and measuring RF power in 50-ohm coaxial line systems through the frequencies of 2 to 1000 MHz. The load section of the TERMALINE Wattmeter serves as a dummy load. The indicating meter is calibrated to read RF power directly in watts with ±5% of full scale accuracy. TERMALINE Wattmeters are available from milliwatts to kilowatts.

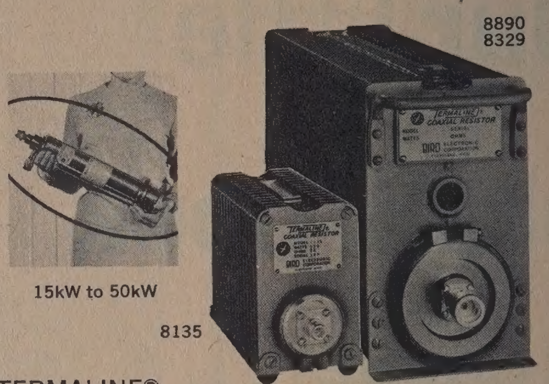
COAXIAL RF FILTERS

Custom engineered or field-proven designs. High rejection attenuation filters available with Low-pass cut-off from 16 to 2700 MHz (about fifty designs at 400 MHz), Hi-pass cut-off frequencies from 30 to 1000 MHz, Band-pass as narrow as 5% of center frequency. Sizes from ½ cubic inches, with subminiature connectors, to 3⅛" line.

TERMALINE®

RF COAXIAL LOAD RESISTORS

TENULINE® POWER ATTENUATORS



TERMALINE®

RF COAXIAL LOAD RESISTORS

For accurate, non-radiating termination of 50-ohm RF coaxial transmission lines are designed for use in permanent installations, development testing and trouble shooting of transmitters, intermediate components, power tubes, and accessories.

TENULINE® POWER ATTENUATORS

In addition to terminating a 50-ohm system, deliver an output signal 30 dB below the input, for RFI measurements, for extending the range of low-power wattmeters, for isolation of system components, etc.

THRULINE® RF DIRECTIONAL WATTMETERS

Insertion instruments for measuring and monitoring incident and reflected power in coaxial transmission lines with ± 5% of full scale accuracy. Insertion VSWR is less than 1.05. Net power under any load condition is the difference between incident and reflected power readings, which also yield load VSWR from a nomograph.

4311 THRULINE Peak **and** CW Wattmeter **also** measures power of **pulsed RF** systems such as air navigational aids, telemetry, radar, etc. from 0.4 microsecond pulse width (± 8% accuracy).

Models 4111-12-13-14 are new palm-sized CW Wattmeters with one forward and one reflected power scale for servicing transmitters in the 2-30 MHz, 25-175 MHz or the 450-470 MHz frequency range.

Line Sections with single or double element sockets for all THRULINE Wattmeters, as well as ⅞" diameter instruments available.

QC-TYPE CONNECTORS (Quick Change) Adaptable to particular TERMALINE, THRULINE, and TENULINE units, these connectors may be quickly changed in the field. Connector types available are: Female or male BNC, TNC, N, C, SC. HN. LC. UHF, LT, ⅞" and 1⅝" EIA Flanged.

Normally supplied: (1) Female N, (2) Female LC, (3) Male N.

Prices are subject to change without notice. F.O.B. Cleveland, Ohio.

Noise figure of mixer-preamplifiers is obtained by adding range given for the mixer selected and the figure shown under "IF N.F. over 1.2 dB" for the required preamplifier. EXAMPLE: A CBH mixer mating with a -3 preamplifier having a 60 MHz center frequency and 8 MHz bandwidth has a noise figure range of 6.5 to 7.0 dB plus 0.4 dB; thus the noise figure range is 6.9 to 7.4 dB.

†RF to IF power gain: 6 dB (assumed mixer loss) has been deducted from preamplifier gain in determining stated values.

‡For linear operation, an input power increase of 3 dB over the stated "mixer input signal" level will result in less than 1 dB of output signal compression.

BROADBAND MIXER PREAMPLIFIERS

LEL series BMP-1 Mixer-preamplifiers, for broadband receiver and MIL-E-5400 airborne applications, are particularly useful in ECM, multi-antenna, monopulse direction finding equipment.

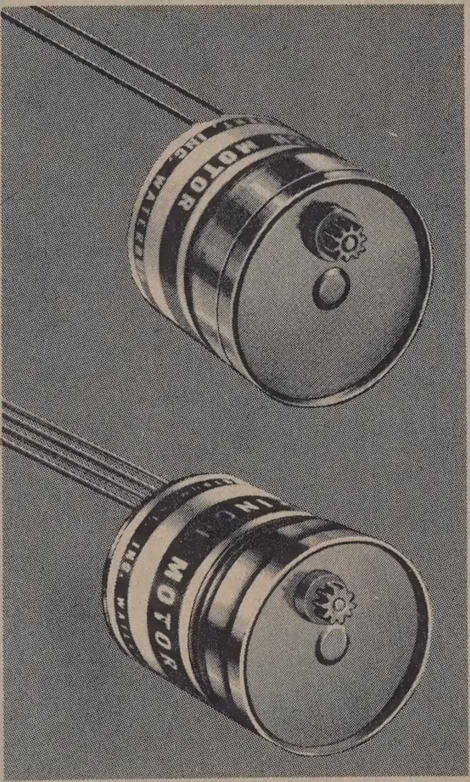
the revolutionary motor... BIG INCH™

These small, unique motors are a genuine break-through in the State of the Art of timing motors. Only 1$\frac{1}{16}$" OD, they develop higher torque than many motors twice their size and always deliver instant, positive directional starting. They operate on 1 or 2 watt input. Mass production provides low unit cost.



Series 33000
Single Phase, Synchronous, Integrating. Fast Start-Stop. Rotor locks in on first line frequency cycle; stops instantly without coast. One watt input at rated voltage. Standard voltage ratings 20V and 115V, 60Hz. Cool operation. Unidirectional, shaded pole starting. No mechanical no-backs. Gears are heavy duty, permanently lubricated and sealed. Standard speeds 360, 300, 60 and 3.6 RPM. With split coils this motor becomes a stepper motor. Series 31000, below.

Series 33600
Bidirectional, 2-Phase Synchronous Integrating. Instantly reversible by switching capacitor from one coil to the other. Fast start-stop and reversing characteristics for precise positioning. Can "inch" in either direction in small increments. Two watt input. Other characteristics same as 33000 series. With split coils this motor becomes a step servo motor. Series 31600, below.

Series 31000 3-wire Stepper.
Unique principle drives rotor 360° for each pulse cycle. Other step angles available through gear reduction.

Series 31600 Reversible Step-Servo.
Bidirectional operation is obtained by energizing four coils in sequence or can be driven by simple logic circuitry up to 200 steps per second.

Series 32000 Brushless DC Timing Motor with Chronetic™ Governor.
Maintains speed constant within ± 0.1% over a voltage range of 20-30 v. DC. No commutator or contacts.

Bodine offers a complete line of fractional hp motors, gearmotors and speed controls

SPEED CONTROLS for Adjustable Speed Drive Systems:

A Bodine SCR-type speed control (chassis or encased) converts 50/60 Hz A-c to nearly pure D-c for shunt-wound drives. Makes possible smoother speed control of a Bodine drive (motor or gearmotor) over a wider range of speeds. For single source responsibility and maximum performance, insist on a perfectly matched Bodine motor—Bodine control system. A wide selection in the 1/50 to 1/4 Hp range is available.

The Bodine line, within its horsepower range, is unusually complete. There are over 3500 standard motors and gearmotors, with horsepower ranging from 1/2000 to 1/4. Bodine also builds custom and special motors to your design requirements. Our engineers will be happy to help you pinpoint the right one for your specific application need.

CLUTCH AND BRAKE MOTOR 40 IN. OZ. OF TORQUE AT 1 RPM (Unidirectional) / **CLUTCH AND BRAKE MOTOR 120 IN. OZ. OF TORQUE AT 1 RPM (Reversible)**

Both are positive clutch and instantaneous brake motors. For extremely fast starts and stops. Motor runs continuously with clutch and brake controlled by switching actuator only. Clutch starts output shaft within 20 milliseconds; brake stops output shaft within 1/5° at 1 rpm; within 12° at 60 rpm. Motor on AC voltage; actuator AC or DC. Either can be supplied in any voltage combination when motor is AC. Will not overheat. Wide range of speeds.

hurst MODEL AR-DA / MODEL AR-SM

100 IN. OZ. OF TORQUE AT 1 RPM (Reversible) / **40 IN. OZ. OF TORQUE AT 1 RPM (Unidirectional)**

Automatic reset. Planetary-type clutch operates directly upon output shaft. When de-energized, shaft is manual or automatic reset. Addition of external return spring to output shaft provides automatic reset on either model. Motor on AC voltage; actuator on AC or DC. Either can be supplied in any voltage combination when motor is AC. Will not overheat. Capacitor included. Wide range of speeds.

The Standard of Excellence

in AC & DC SERVO MOTORS

Clifton offers a wide variety of AC servo motors, motor-generators and tachometers in sizes 8, 10, 11, and 15. Our motors exhibit a very high degree of efficiency, higher torque to inertia ratios and lower, more uniform starting voltages. All motors are high temp. resistant.

Due to higher torque/inertia ratios, our generators and tachs are smaller and lighter.

Clifton also offers temperature compensated integrating tachs and high signal to noise integrating type tachs. Gearheads are available on motors and tachometers.

Our DC servo motors are versatile, low in cost, offer particularly long life cycles and are available in sizes 8, 9 and 13.

For information call Clifton Div. of Litton Industries, Drexel Hill, Pa. 19026, (215) 622-1000, or your Local Clifton Sales Office.

The Standard of Excellence

in TORQUE MOTORS

Clifton offers an extremely wide variety of torquers in a wide range of sizes from 1.125" O.D. to 5.125" O.D. Unique "inside/outside" models are available in which the outer member is the armature and the magnetic field the inner member of the torquer.

Clifton torquers exhibit minimum current leakage due to double insulated hi temp magnet wire. Many other quality features such as wear and environmental damage resistance based on advanced materials technology are incorporated in these units.

For further information call Clifton Division of Litton Industries, Drexel Hill, Pa. 19026, (215) 622-1000, or your Local Clifton Sales Office.

CLIFTON

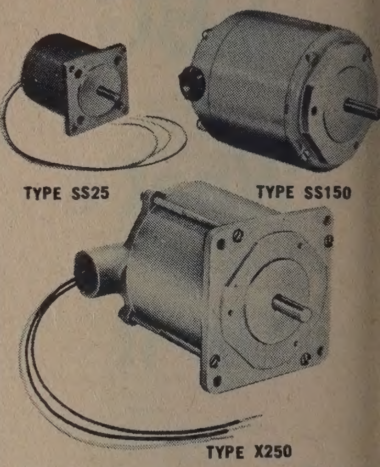
SLO-SYN®

Synchronous/ Stepping Motors



Permanent magnet a-c motors with instant start, stop and reverse and basic shaft speed of 72 rpm at 60 cycles (200 rpm for types TS50 and TS52). Bidirectional; stop or reverse within less than 5° of shaft rotation or .025 sec. Can remain coupled to load and safely overdriven when used with auxiliary high speed motor. Can be completely stalled without overheating or risk of damage. Can also be used for phase-switched d-c stepping at either 100 or 200 steps/rev. (36 or 72 steps/rev. for types TS50 or TS52). Steps accurate within ±.09° noncumulative.

MODEL DP 100
DC PLUG-IN

This all-solid-state precision measurement system offers unlimited expansion capability through plug-in additions, resulting in a specialized instrument for each type of measurement. New plug-ins now broaden the measurement capability of this field-proven unit. Over 10,000 are in use at present.

Scaling controls make possible resolution of up to seven digits on the three-digit display by utilizing the overrange capability of many of the plug-ins, thus providing high resolution and accuracy with minimum investment. Companion devices such as the PR 4900 Digital Printer and 1050 Digital Set-Point Controller further extend the utility of the DMS 3200 System.

NECO-1000 SERIES HIGH-STABILITY CRYSTAL OSCILLATORS

The NECO-1000 series 1 MHz high-stability crystal oscillator is a compact plug-in type using a high-precision AT-cut overtone quartz crystal, a proportionally-controlled oven and silicon transistors. The NECO-1000 is used in counters, timing systems, time-code generators, synthesizers and similar devices. The hermetically-sealed crystal voltage control eliminates fluctuation of external frequency adjustment.

FREQUENCY STABILITY

Condition	NEC—1000L
Aging rate	1×10^{-9}/day
Temperature —10~+65°C	1×10^{-10}/°C
Input voltage ±10%	$\pm 1 \times 10^{-9}$
Load ±20%	$\pm 1 \times 10^{-9}$

THOUSANDS OF FREQUENCIES FROM FORK STANDARDS, INC.

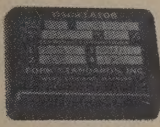
Precision Oscillators

Fork Standards tuning fork and crystal oscillators provide high-accuracy outputs at frequencies from sub-audio through RF. Case sizes range from miniature PC board-mount types to plug-in, oven-stabilized frequency standards. Both square wave and sine wave outputs are available.

Tuning forks are limited to frequencies up to about 15 kHz, and are generally preferred for low-frequency applications because they require less frequency-division circuitry than an equivalent crystal unit. A low-frequency tuning fork oscillator is thus more compact, draws less current, and is usually less expensive and more reliable than a low-frequency crystal unit. However, for highest accuracy or for higher frequencies, crystals are preferred.

The Fork Standards oscillators which are specified most often are described below.

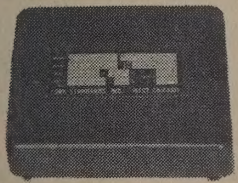
Model G, GQ
(base 1½" Sq.)



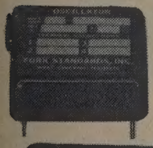
Model FO, FR
(base 1½" Sq.)

Model P, PQ
(base 1½" x 3½")

Model LO
(base 1½"x¾")



Model R, RQ
(base 3 3/16" Sq.)



Model UQ
(base 1½" Sq.)

Model DQ
(base 2" Sq.)

MODEL G: Plug-in general purpose unit with very-low-frequency capability. Also available with studs and solder hooks.

MODEL FO: Very compact, designed for printed circuit board applications. Use where space is at a premium.

MODEL P: Larger printed circuit board unit than Model FO. Increased capabilities and slightly lower unit cost. Can be chassis mounted.

MODEL LO: Smallest oscillator available, with square wave output only. PC board mount.

MODEL R: Largest PC board mount model, with lowest case profile at sub-audio frequencies.

MODEL FR: Tuning fork resonator in F case. For use where user provides oscillator circuitry, or as a highly selective audio filter element.

MODEL GQ: General-purpose plug-in crystal oscillator, with output frequencies down to .125 Hz. Can be supplied with studs and solder hooks.

MODEL UQ: Smallest crystal unit, designed for PC board mount. PC pins hold unit to board. Vernier frequency adjustment available.

MODEL PQ: General-purpose flat case unit for PC board or chassis mounting. Larger case volume than UQ.

MODEL RQ: Largest board-mounted crystal model, with lowest profile in sub-audio frequency range.

MODEL DQ: Available with either snap-action or proportional control oven, plug-in or stud-mounted base with solder hooks. Accuracy to .0005% or better over extreme temperatures.

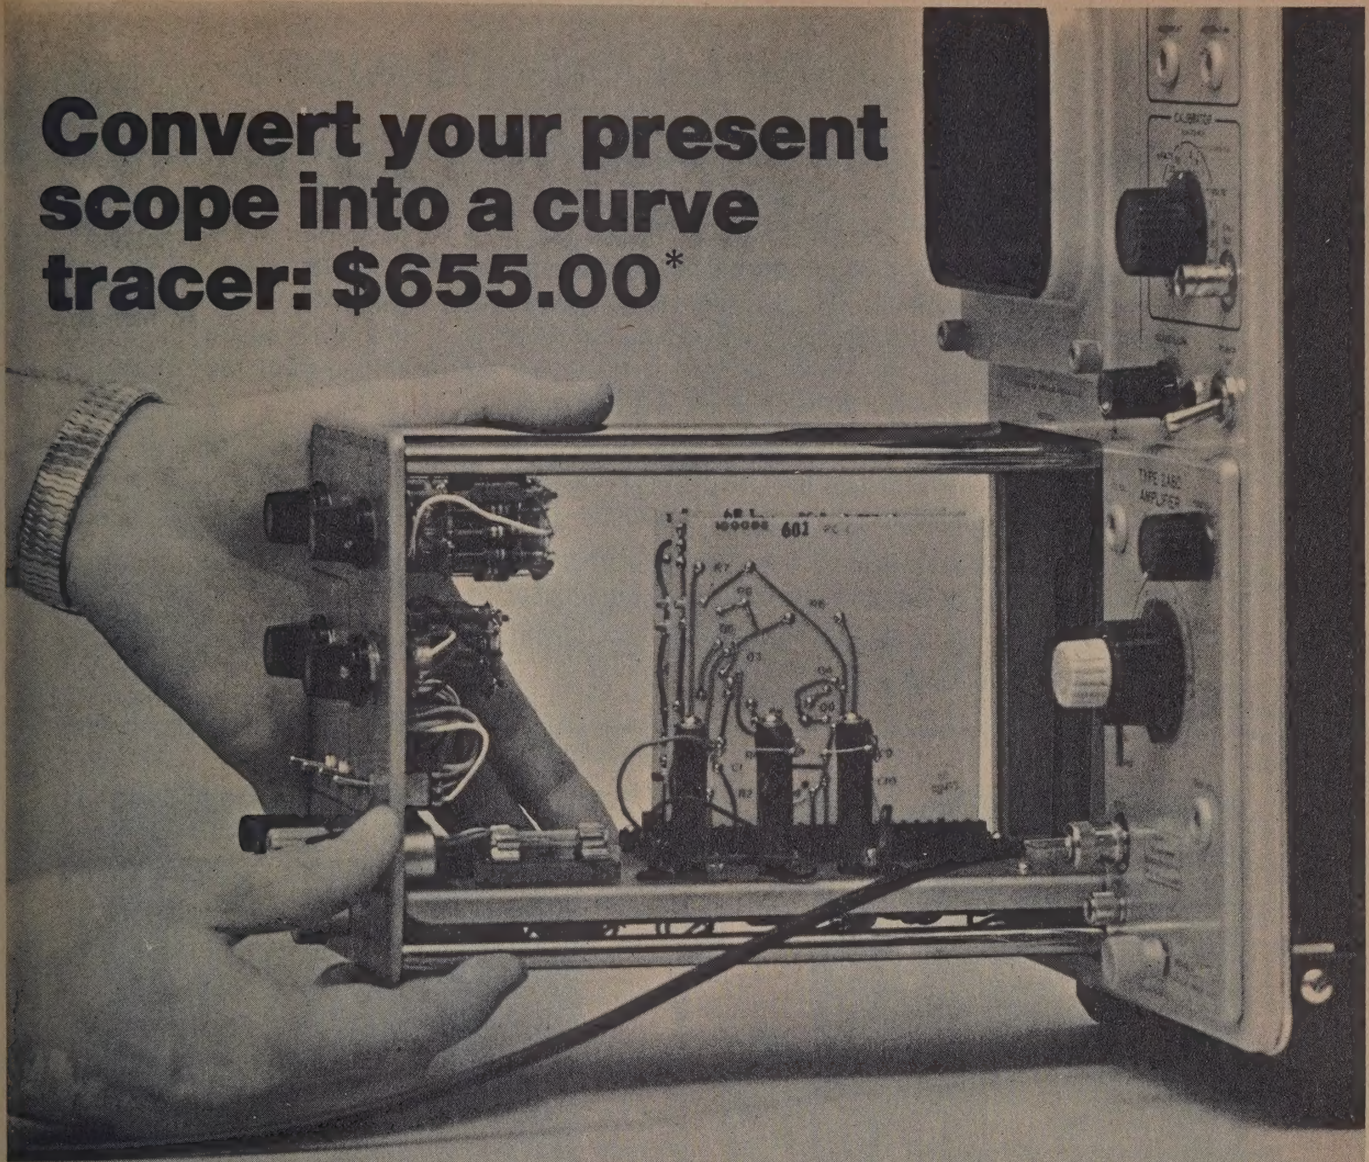
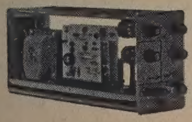
U-TECH DIV INDUSTRIAL PHYSICS & ELCTNS CO. SALT LAKE CITY UTAH . . . ADV
U-Tech Div Industrial Physics & Elctns Co. Salt Lake City . . .

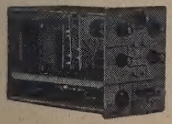
Convert your present scope into a curve tracer: $655.00*



The first plug-in unit that transforms an existing scope into a curve tracer—at ½ to ⅓ the cost!



U-Tech plug-in
Model 681: $655.00*.
For use with Tektronix 560 series Oscilliscopes.



U-Tech plug-in
Model 682: $675.00*.
For use with Tektronix 530, 540, 550, 580 series Oscilliscopes.

U-Tech Console
Model 683: $685.00*.
For use with any X-Y Oscilliscope.

*Prices apply to purchases and shipments within U.S.A. fob Salt Lake City, Utah

Now you can expand your present Oscilloscope to include curve tracer capabilities. U-Tech plug-in and console units enable any X-Y Oscilloscope to display the dynamic characteristics of both NPN and PNP transistors, N Channel and P Channel junctions, FETs, MOS-FETs, bipolars, unijunctions, diodes, tunnel diodes and SCRs.

So, if it wasn't in the budget before, now it can be, and even if you were planning for a curve tracer, you can now buy two, possibly three, of these units for the price of any other characteristic curve tracer.

Ask your distributor about these U-Tech curve tracer units or order direct.

We know our way around—we've been developing papers for new applications, improving papers for old, for more than 20 years now. As a result we have a complete line of pressure, heat, ink and electrosensitive recording papers and a thorough understanding of the mechanics of instrument and computer read-out.

We also have complete printing facilities and can provide custom packaging when required.

It makes a difference when you need design assistance on regular or "special" papers.

Power Supplies to Your Specifications

It is the unique power supply problem for which Peerless has the solution whether your operating requirements are commercial or Mil. Spec. Peerless experience covers both DC and AC supplies. AC inputs are normally 60 to 400 Hz. DC outputs extend to 30,000 V.D.C. at low current. Regulation values normally range from 0.25% to 10% no load to full load with peak-to-peak ripple voltages less than 1% of output voltage within this range. Peerless has designed and manufactured power supplies with two or more outputs, that operate in ambients up to 125°C and withstand shock to 50G.

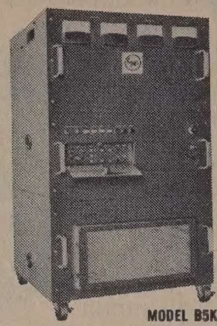
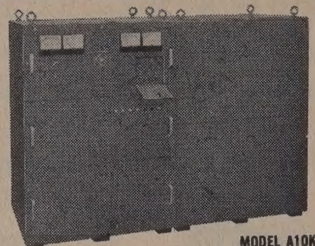
CML wide band power amplifiers for audio and ultrasonic testing

SPG series

1KVA to 200KVA



MODEL B5K



MODEL A10K

- Full power into reactive loads.
- Low distortion.
- ±0.5 db frequency response.
- Ideal for CW and PULSED duty.
- Selectable output taps for matching wide range of load impedances.
- Rugged construction for marine or airborne installations.

APPLICATIONS

SONAR TESTING — HIGH INTENSITY ACOUSTIC SYSTEMS
VIBRATION TESTING — INDUSTRIAL PROCESS CONTROL

MODEL S5K

SPECIFICATIONS

OUTPUT FREQUENCY: Standard full power frequency range is 100-10,000 cps except for Model A3K which has a 200-15,000 cps range. Other frequency ranges between 5 cps and 200KC are available on a custom basis.

OUTPUT CONFIGURATION: 2 wire floating.

DUTY CYCLE: Continuous duty at full rated output power. Please consult CML for pulsed or intermittent duty ratings.

FREQUENCY RESPONSE: ±0.5 db, 100-10,000 cps. Model A3K ±0.5 db 200-15,000 cps.

HARMONIC DISTORTION: Less than 3%, 100-10,000 cps; less than 1.5% mid-band.

HUM AND NOISE: At least 60 db below rated output tap voltage.

OUTPUT IMPEDANCE SELECTION: Taps are selected by link change. Front panel tap select switches are available at additional charge.

INPUT SERVICE: Models rated 1KVA to 20KVA require 208/230 volts, 3 phase, 60 cycles. Larger models require 440/460/480 volts, 3 phase, 60 cycles — higher input voltages available on special order

SIGNAL INPUT VOLTAGE: 1.0 volt RMS for rated output.

SIGNAL INPUT IMPEDANCE: 600 ohms, single ended.

KEYED OPERATION: All models are suitable for operation with keyed input signals.

METERING: All models include complete front panel metering. In addition, models rated at 5KVA to 200KVA have recessed front panel section with test points for critical circuit parameters — to keep down-time to a minimum.

PROTECTIVE CIRCUITS: CML instantaneous overload circuitry protects both amplifier and load. Rapid front panel reset permits return to normal operation with minimum down-time.

FINISH: Panels are satin green enamel; cabinets are green armorhide. Special colors are available on a custom basis.

**AUDIO AMPLIFIER ONLY: Each model is also available as an audio power amplifier only (without a built-in oscillator) with a full power range of 45-6000 cps. All standard models (with or without oscillator) include an input signal jack for use with external signal source. Specify the Basic Power Supply Model and Suffix # (—JA) if oscillator is not required.

NA series
500VA to 15KVA

The NA SERIES of AC POWER SUPPLIES are exceptionally flexible sources of audio power. Each power supply consists of a **REGULATED AUDIO POWER AMPLIFIER** with interchangeable fixed or variable **PLUG-IN OSCILLATORS** for a wide range of precision AC power applications. The Amplifier has a full power range of 45-6,000 cycles. With the incorporation of a **CML** Plug-in Oscillator precise fixed or adjustable output frequencies are available anywhere within this range. Plug-in Oscillators are Wein Bridge or Tuning Fork controlled.

Regulated Power Amplifiers with Precision Plug-in Oscillators

- **Each Model can be operated either as a precision AC Power Supply or as an Audio Power Amplifier.**
- **INTERCHANGEABLE PLUG-IN OSCILLATORS** . . . 23 standard oscillators are available — to provide fixed or adjustable output frequencies between 45 and 6,000 cps and stabilities to ±0.001%.
- **INSTANTANEOUS OVERLOAD PROTECTION**
- **MINIMUM PACKAGE SIZE** . . . 2000VA in 14″ rack height; 750VA in 8¾″ rack height.
- **CONSTANT VOLTAGE OUTPUT** . . . 0.5% regulation for no load to full load change — response time less than 50 microseconds.

Frequency stabilities range between ±0.25% and ±0.001%.
Plug-in Oscillators include gain control as well as front panel jack for external signal drive. Each Power Amplifier model may also be operated without a plug-in oscillator; however, in that case, the Model SA-2 External Signal Adapter is required.
Precise amplitude stability and low harmonic content are provided by a combination of positive current feedback and inverse voltage feedback.

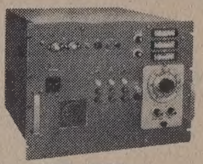
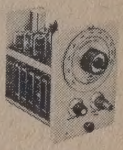
three phase frequency converters



MODEL T2500A
With SG-36B Oscillator



MODEL SG-35A
Plug-In Oscillator

TA series
150VA to 20KVA

The new TA Series of Three Phase Frequency Converters are exceptionally versatile sources of AC power. Each converter consists of a regulated **THREE PHASE AMPLIFIER** with interchangeable fixed or variable frequency **PLUG-IN OSCILLATORS** for a wide range of precision AC power applications. The amplifier has a full power range of 45-6,000 cps. With the incorporation of a CML plug-in oscillator (which includes 120° phase shift network) precise fixed or adjustable frequencies are available anywhere within this range.

- **MINIMUM PACKAGE SIZES** . . . 2500VA in 14″ rack height.
- **INTERCHANGEABLE PLUG-IN OSCILLATORS** . . . 21 standard oscillators are available — to provide fixed or adjustable output frequencies between 45 and 6,000 cps and stabilities to ±0.001%.
- **INSTANTANEOUS OVERLOAD PROTECTION** . . . An overload of any one phase causes complete output shutdown, protecting 3 phase load.
- **DUAL OUTPUT VOLTAGE FOR △ OR Y LOADS** . . . Adjustable voltages 0-125 volts line-to-line as well as 0-217 volts line-to-line are presented at output terminals; output is isolated for maximum versatility.
- **CONSTANT VOLTAGE OUTPUT** . . . 0.5% regulation for no load to full load change — response time less than 50 microseconds.
- **OUTPUT VOLTAGE UNAFFECTED BY UNBALANCED LOADS.**

Plug-in oscillators are Wein bridge or tuning-fork controlled for frequency stabilities ranging between ±0.25% and ±0.001%. Dual output taps are standard for matching either Delta or Wye loads (output may be connected either 120 volts line-to-line or 208 volts line-to-line). Precise amplitude stability and low harmonic content are provided by a combination of positive current feedback and inverse voltage feedback.

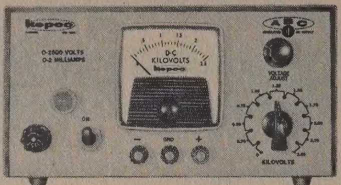
KEPCO HIGH VOLTAGE POWER SUPPLIES

High voltage regulators employ either vacuum tube or hybrid circuit techniques to maximize the reliability of the high voltage series pass.

ABC®
(HYBRID)

REGULATION:
<0.05% Line
<0.05% Load
RIPPLE: <1 mV rms



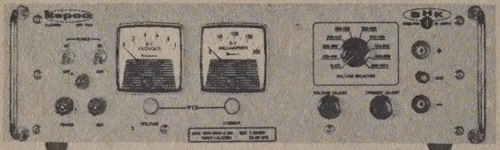
The ABC group of bench-style programmable voltage regulators span a wide range of voltages. The transistor group covers 0–2V to 0–100V; the hybrid group 0–200V to 0–2500V. Hybrid models employ a high voltage vacuum tube series regulator, convection cooled, driven by a high gain transistor amplifier. The 0–200 and 0–425 volt models employ a continuous 10-turn wirewound, 20 PPM TC voltage control. The 0–1000 volt, 0–1500 volt and 0–2500 volt models employ a 10-step voltage selector with 10-turn vernier. They may be programmed, however, continuously from zero to their rated voltage.

MODEL	VOLTS	AMPS	PRICE	WGT.
ABC 200M	0–200	0–0.1	220.00	14
ABC 425M	0–425	0–0.05	220.00	15
ABC 1000M	0–1000	0–0.02	309.00	15
ABC 1500M	0–1500	0–0.01	309.00	15
ABC 2500M	0–2500	0–0.002	383.00	18

Price includes meter, for unmetered model, delete suffix "M" and deduct $20.00 for models ABC 200 and ABC 425. Deduct $15.00 for models ABC 1000, 1500 and 2500 (any quantity order).

BHK

REGULATION: <0.005% Line – <0.01% Load
RIPPLE: <1 mV rms



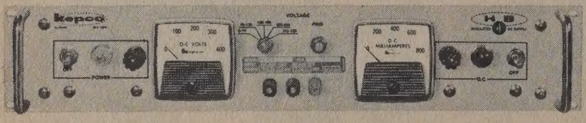
The high voltage hybrid BHK models employ twin-transistor amplifiers (one for voltage, the other for current) to drive a series pass tube regulator in either voltage or current mode, with automatic crossover and VIX® mode indicators. By restrapping for high speed, the same model is also a fast programmable voltage or quick recovery current source. Built-in offset nulling controls allow precision operational programming. Panel controls are 10-turn, 20 PPM TC wirewound, with a 10-position selector for additional voltage resolution.

MODEL	VOLTS	AMPS	PRICE	WGT.
BHK 500–0.4M	0–500	0–0.4	$825.00	40
BHK 1000–0.2M	0–1000	0–0.2	825.00	41
BHK 2000–0.1M	0–2000	0–0.1	850.00	43

Price includes meters, for unmetered models, delete suffix "M". In quantities of 12 or more units deduct $30.00 from price.

HB

REGULATION: <0.01% Line – <0.01% Load
RIPPLE: <1 mV rms



The high voltage hybrid HB power supplies use a high gain transistor comparison amplifier to drive the series pass tube regulator. Voltage feedback is by means of a 5-position range switch and 10-turn, 20 PPM TC wirewound vernier control with remote programming within the span of any one range (to zero with derating). Current may be regulated with external sensing and feedback using a rating chart to determine the allowable compliance range.

MODEL	VOLTS	AMPS	PRICE	WGT.
HB 2AM	0–325	0–0.2	$325.00	35
HB 4AM	0–325	0–0.4	365.00	35

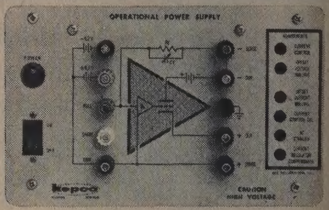
HB 8AM	0–325	0–0.8	435.00	43
HB 250M	0–250	0–1	595.00	43
HB 525M	0–525	0–0.5	550.00	43

Price includes meters, for unmetered models, delete suffix "M". In quantities of 12 or more units deduct $30.00 from price.

OPS
(HYBRID)

OFFSET VOLTAGE:
<0.1 mV Line
<1.0 mV Load
RIPPLE:
<0.01% E_o max. rms



The Kepco Operational Power Supply is a unique instrument; a combination self-powered operational power amplifier and d-c power supply. The OPS group is suitable for a wide variety of signal processing chores: scaling, summing, integrating and impedance transformation. The OPS Hybrids utilize a high voltage vacuum tube, together with a d-c coupled transistor amplifier. Their fast output slewing enables the OPS models to be fast-recovery, programmable, current controllers or audio spectrum voltage amplifiers.

MODEL	VOLTS	AMPS	PRICE	WGT.
OPS 500	0–500	0–0.04	$368.00	19

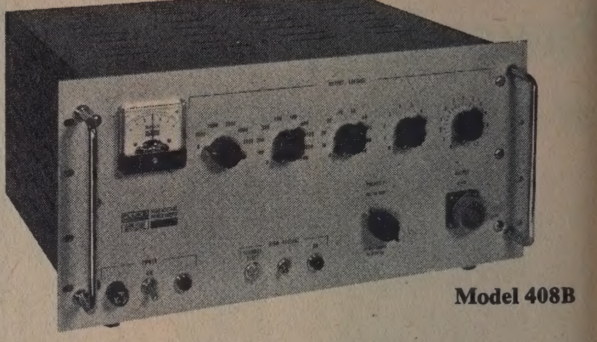
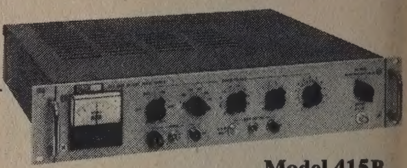
Power supplies DC regulated

Fluke precision power supplies
0 to 30,220 volts, up to 300 ma output



Model 408B

Model 412B



Model 415B

Fluke high voltage power supplies have long been the standard of the industry when quality and reliability are essential. Fluke HVPS offer high calibration accuracy, tight line-load regulation, fine voltage resolution, excellent long term stability, low temperature coefficient, and freedom from corona, jitter, bounce or overshoot.

Every specification of Fluke power supplies is conservative; customers have found this to be true in thousands of applications and have demonstrated their confidence by specifying Fluke when their voltage demands increase.

Many applications call for high calibration accuracy, while others require high stability and a low ripple component. All are combined with excellent line and load regulation to insure that Fluke power supplies meet or exceed virtually all systems requirements.

Fluke supplies are produced in volume and a large stock is maintained making them readily available and competitively priced.

Typical applications include power BWO's and TWT's, klystrons, photomultiplier tubes, CRT acceleration and focusing, proportional counters, ionization chambers, mass spectrometry, voltmeter and volt box calibration, charging capacitor banks, high-resolution X-ray equipment. They are also extensively used in high voltage research and for component evaluation and test.

*Remotely Programmable

New Programmable High Voltage Power Supply—Model 4150A

The 4150A offers the automatic test system user a precision high voltage supply that was designed specifically for remote control. The 4150A will deliver 50 ma at any output voltage up to 3400 volts. Programmable current limiting is also provided. The output voltage is programmable in five decades which gives a resolution of 0.1 volts. The remote control lines for the 4150A are logic compatible with almost all solid state control systems in use today.

A zero center voltmeter provides a visual monitor of the output magnitude and polarity when the instrument is operated locally or from a remote location.

New NIMS High Voltage Power Supply

ORDERING INFORMATION:

Power supplies are identified by a multipart model number, usually comprising a letter group prefix (identifying the design) followed by a series of numbers that specify the model (usually in rated volts and amperes). Options will be identified by letter suffix specifying meters, cases, special controls, etc.

It is important for the expeditious handling of inquiries, orders, etc., that the full Kepco model number be used for identification *even* if local specification control numbers have been assigned by your organization.

WARRANTY:

All Kepco products are backed by a firm one (1) year warranty, covering all parts and labor. The warranty is honored at our factory Service Department, Flushing, New York, and at field service depots maintained at strategic cities. Consult your local sales representative concerning the availability of local service.

PARTS:

Maintenance parts may be obtained through the field representative or from Kepco directly. When ordering parts, please use the identifying Kepco part number, and give the model and serial number of the instrument for which they are intended. Do *not* return any parts to Kepco unless authorization tags and instructions are provided.

PAX modules are low cost, single-amplifier power supplies that can be used with voltage or current feedback. The HS models (high speed) are especially recommended for current control because of their fast-recovery characteristics. In the PAX design, a convection-cooled PNP series pass transistor is used, the negative output terminal is common to the signal input. The PAX models are thus the signal-complement of the PCX and OPS designs.

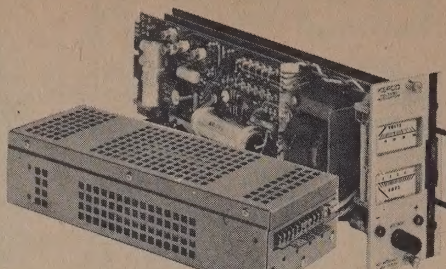
PCX



REGULATION:

RIPPLE: <0.1 mV rms

The PCX group of voltage regulators are available in two forms—as programmable modules for OEM's or (with the suffix "MAT") as metered plug-ins with a built-in, 10-turn voltage control. The regulator is a self-cooled series NPN transistor driven by Kepco's monolithic linear I-C amplifier and protected by adjustable current limiting. The regulator will control current when equipped with an external pair of sensing and feedback resistors. The PCX series, with its I-C regulator replaces Kepco's PBX design group.

The Kepco PRM voltage regulated modules are simple, reliable, efficient, fixed output sources. The design is based on a ferroresonant power transformer called Flux-O-Tran® which provides both regulating and overload current limiting. The extra-filtered models (suffix F) have a Pi section LC filter, reducing their ripple to about a tenth that of the single section capacitor-filtered models. The *dual* output models have two independent d-c circuits that may be used in series or in parallel or separately.

The PWR modules couple a high-gain, d-c feedback regulator and convection-cooled NPN series pass transistors to a ferroresonant Flux-O-Tran® power transformer to provide well regulated voltage with a ±5% adjustment range around the nominal level. The nominal voltage for each model is set by a fixed resistor wired externally across the connection barrier strip. This resistor may be changed, or a variable resistor substituted, to alter the nominal setting. The output current derates when the nominal setting is reduced.

REGULATION:

RIPPLE:

This is a high speed (fast programming) version of the Kepco CK design. The high speed is achieved by removing output and feedback capacitances, reducing the stability margin. For this reason, CK-HS models should not be used in place of a voltage source in applications where its fast-programming voltage agility is not required. It is ideal as a current source because of the quick recovery characteristic. Offset nulling controls are built-in. The series pass transistor is a PNP element, making the negative output terminal signal-common.

The Kepco Operational Power Supply is a unique instrument; a combination self-powered operational power amplifier and d-c power supply. The OPS group is suitable for a wide variety of signal processing chores: scaling, summing, integrating and impedance transformation. The "B" models, incorporating a linear I-C input amplifier, are in modular form for OEM's; the "BTA" versions are plug-in modules which offer a 10-terminal patch panel for bench-type operational manipulations. Model OPS 2000 is a hybrid type utilizing a high voltage vacuum tube. Their fast output slewing enables the OPS models to be fast-recovery, programmable, current controllers or audio spectrum voltage amplifiers.

The ABC group of bench-style programmable voltage regulators span a wide range of voltages. The transistor group covers 0–2V to 0–100V; the hybrid group 0–200V to 0–2500V. Hybrid models employ a high voltage vacuum tube series regulator, convection cooled, driven by a high gain transistor amplifier. The 0–200 and 0–425 volt models employ a continuous 10-turn wirewound, 20 PPM TC voltage control. The 0–1000 volt, 0–1500 volt and 0–2500 volt models employ a 10-step voltage selector with 10-turn vernier. They may be programmed, however, continuously from zero to their rated voltage.

The CC, PCX-MAT and OPS-BTA plug-in systems permit a wide variety of options. The assemblies CC, PCX-MAT or OPS-BTA having a panel, are equipped with a slide plate which enables them to slip into either Models CA—3 (single unit), CA—4 (dual), CA—5 (triple) or the Model RA 22—6. The Models CA—3, 4 and 5 are complete cases with integral PC connector, line cord, and barrier strip(s) for access to the control functions. The Model RA 22—6 requires the use of from one to six of Model PC—2 connectors (depending on how many instruments are to be plugged in) which must be ordered separately and installed. The RA 22—6 is equipped with a line cord.

The Blank Panel Adapter (Model BPA—22) permits the mounting of regular PAX, PCX and OPS-B modules (uncased style) in any of the above cases or rack adapters. The panel is, of course, blank. Filler panels, Model RFP 22—1, —2 and —3 are available to fill in blank slots in any of the cases Model CA—3, 4, 5 and RA 22—6.

Adapters, Models RA 12—1, RA 13—4 and RA 11—6, will mount one, four or six *cased* PAX, PCX or OPS-B modules in a 19-inch panel without any of the panel control features or metering. Connector PC—1 may be used to connect to such modules or their barrier strips may be utilized for wiring.

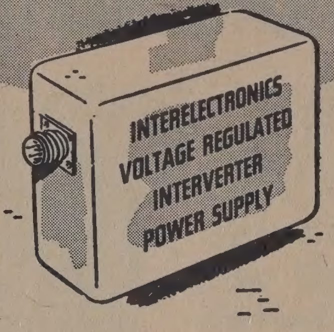
PROVEN RELIABILITY—

DC-DC, DC-AC, SOLID-STATE POWER INVERTERS

over 260,000 logged hours— voltage-regulated, frequency-controlled, for missile, telemeter, ground-support, 135°C all-silicon units available now—



Interelectronics all-silicon thyratron-like gating elements and cubic-grain toroidal magnetic components convert DC to any desired number of AC or DC outputs from 1 to 10,000 watts.

Ultra-reliable in operation (over 260,000 logged hours), no moving parts, unharmed by shorting output or reversing input polarity. High conversion efficiency (to 92%, including voltage regulation by Interelectronics patented reflex high-efficiency magnetic amplifier circuitry).

Wide input voltage range (1 to 250 volts DC). Wide input voltage regulation (output voltage maintained with variations up to 50% in input voltage).

Light weight (to 6 watts/oz.), compact (to 8 watts/cu. in.), low ripple (to 0.01 mv. p-p), excellent voltage regulation (to 0.1%), precise frequency control (to 0.2%) with Interelectronics extreme environment magnetostrictive standards or to 0.0001% with fork or piezoelectric standards.

Complies with MIL specs. for shock (100G 11 misc.), acceleration (100G 15 min.), vibration (100G 5 to 5,000 cps.), temperature (to 150 degrees C), RF noise (I-26600).

AC single and polyphase units supply sine waveform output (to 2% harmonics), will deliver up to ten times rated line current into a short circuit to actuate MIL type magnetic circuit breakers or fuses, will start gyros and motors with starting current surges up to ten times normal operating line current.

Now in use in major missiles, powering telemeter transmitters, radar beacons, electronic equipment. Single and polyphase units now power airborne and marine missile gyros, synchros, servos, magnetic amplifiers.

Interelectronics—first and most experienced in the solid-state power supply field produces its own all-silicon solid-state gating elements, all high flux density magnetic components, high temperature ultra-reliable film capacitors and components, has complete facilities and know how—has designed and delivered more working KVA than any other firm!

the Simple Power Supply from KEPCO

PRM REGULATED POWER MODULES

Simple? . . . yes, in the number of parts required — but they are a complex-performing power supply system providing voltage regulation (line ±1%), low output impedance and current limiting overload protection.

The Kepco PRM design owes its performance to its self-regulating power transformer, the Flux-O-Tran® which, by ferroresonant operation, provides the regulation and overload limiting action.

Some of the advantages of the extraordinary simplicity are:

- No overvoltage risk — for IC's (therefore, no need for expensive crowbars).
- Extreme reliability. (MTBF >130,000 hours).
- Operating simplicity. (Just connect a-c and d-c and go!).
- Use as the main source for local point-of-load regulators.
- Low cost, prices range from $85.00 for a 60 watt model to $197.00 for a 300 watt, dual-output model.

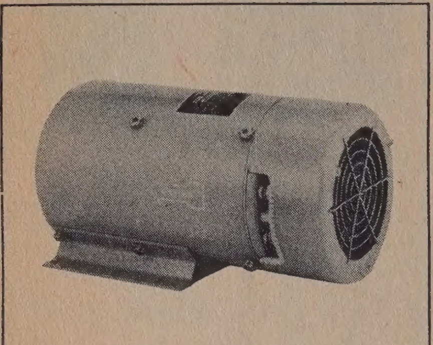
28G5P SERIES POWER SUPPLIES



up to 200 AMPS. D. C. in compact weight-saving packages

The Tung-Sol 28G5P series consists of four standard units that supply 25, 50, 100 or 200 amps. at 28 volts D.C. These are production power supplies available on an off-the-shelf basis. These transformer-rectifiers are designed for continuous operation under the most adverse environmental conditions. Their light weight and small package size allows remote installation of the transformer-rectifiers in communications shelters, field equipment, GSE, and maintenance shops. They are ideal for equipment that is to be transported by air.

An internal blower together with a modified pressure cooling system insure uniform heat dissipation in any mounting attitude.

lodular power supplies are designed for "built-in" regulated power in a variety of tyles. All will chassis or panel mount, and some (the PAX-PCX) are available for lug-in service. With the "MAT" option (meters-adjustments-terminals), the PCX ower supplies may be used individually as bench supplies or combined for multile output (up to 6 at a time). The PRM and PWR models make use of Kepco's erroresonant power transformer, Flux-O-Tran®. Special voltage-fixed PRM modles are also available built to order.

The PAR modules couple a high gain d-c feedback regulator with convection cooled NPN pass transistors to a conventional power transformer for 50–440 Hz power frequency accommodation. The PAR modules produce a fixed voltage with a ±5% adjustment range at a current rating which depends upon the ambient temperature. PAR models may be programmed to a lesser nominal voltage (with current derating) by substituting for the resistor wired across the control terminals.

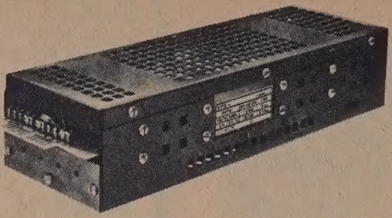
PAX



REGULATION:

RIPPLE:

PAX modules are low cost, single-amplifier power supplies that can be used with voltage or current feedback. The HS models (high speed) are especially recommended for current control because of their fast-recovery characteristics. In the PAX design, a convection-cooled PNP series pass transistor is used, the negative output terminal is common to the signal input. The PAX models are thus the signal-complement of the PCX and OPS designs.

The PCX group of voltage regulators are available in two forms—as programmable modules for OEM's or (with the suffix "MAT") as metered plug-ins with a built-in, 10-turn voltage control. The regulator is a self-cooled series NPN transistor driven by Kepco's monolithic linear I-C amplifier and protected by adjustable current limiting. The regulator will control current when equipped with an external pair of sensing and feedback resistors. The PCX series, with its I-C regulator replaces Kepco's PBX design group.

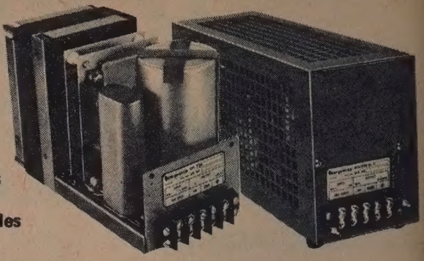
PRM



REGULATION:
Line: <± 1%
Load: See tables

RIPPLE: See tables

The Kepco PRM voltage regulated modules are simple, reliable, efficient, fixed output sources. The design is based on a ferroresonant power transformer called Flux-O-Tran® which provides both regulating and overload current limiting. The extra-filtered models (suffix F) have a Pi section LC filter, reducing their ripple to about a tenth that of the single section capacitor-filtered models. The *dual* output models have two independent d-c circuits that may be used in series or in parallel or separately.

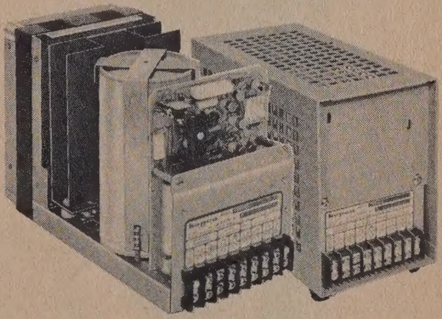
PWR

REGULATION:
<0.005% Line
<0.05% Load

RIPPLE:
<0.25 mV rms



The PWR modules couple a high-gain, d-c feedback regulator and convection-cooled NPN series pass transistors to a ferro-resonant Flux-O-Tran® power transformer to provide well regulated voltage with a ±5% adjustment range around the nominal level. The nominal voltage for each model is set by a fixed resistor wired externally across the connection barrier strip. This resistor may be changed, or a variable resistor substituted, to alter the nominal setting. The output current derates when the nominal setting is reduced.

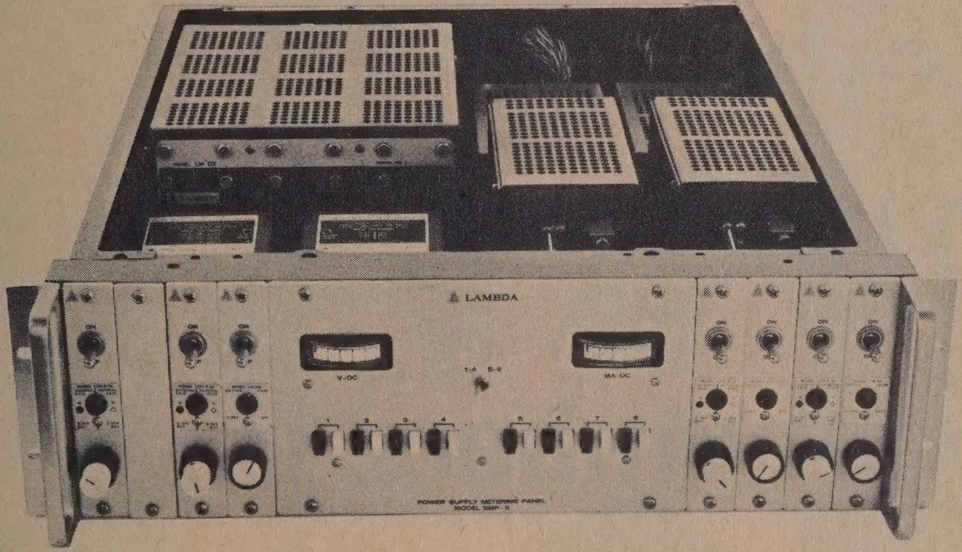
Multiple output power supply systems

Now assemble complete power supply systems to meet your specific need with standard Lambda component power supplies and accessories.



Here's an easy way to get multiple-output, power supply systems with all the advantages of custom-designed systems, but without long delays and high costs. Lambda's new Power Supply Assembly Concept makes custom-design systems obsolete ...greatly simplifies your job. You simply select from more than 260 component power supplies and assemble your system with standard accessories. Or let Lambda do the assembly for you at a modest charge.

Lambda, through the 14 power packages of the LC/LM power components can supply voltages to 150 vdc and currents to 150 amps dc to fit any application. With 4 standard rack sizes Lambda can supply up to 16 diifferent outputs per rack.

Here's all you do:

1. List your individual voltage and current requirements.
2. Select the power modules you need for proper voltages and currents...remember you can series/parallel units.
3. Select the System Power Protector or System Power Sequencer if required.
4. Select the overvoltage protection units required.
5. Select the smallest rack adapter that will house your modules.
6. Select the necessary power control panels and metering panel.
7. Select all the required cables.
8. Select blank panels.
9. Order all the power supplies and accessories needed to assemble your system. If you prefer, Lambda will assemble the system for you. Add 5% to the total cost of all power supplies and accessories to determine the cost for Lambda to assemble.

MODERN VALUE-ENGINEERED PRODUCTS

PM500 SERIES DC POWER SUPPLIES

The PM400, PM500 and PM600 Series is a family of encapsulated, single and dual output regulated DC power supplies having output voltages and currents from 3.6 VDC @ 250 mA to 180 VDC @ 10 mA in P.C. mount, octal mount and bench model configurations. The new Model PM502 "dual 15" op-amp supply is a pin-for-pin replacement for other manufacturers' supplies.

DECIMAL DISPLAY MODULES

The DM500 Series are self-contained, plug-in decimal display units. The DM507 has an IC BCD-to-decimal decoder/driver, an IC decade counter, a side view in-line numerical indicator tube and a quad latch storage register. The popular DM519 has the decoder/driver, decade counter and indicator tube. The DM523 has the decoder/driver, indicator tube and storage register and the DM529 has the decoder/driver and indicator tube. All models plug into a standard 15 position (0.156" spacing) connector. The indicator tube, included in all models, provides numerical readout from 0 to 9 including decimal point. **An attractive bezel and mounting chassis is available for complete assemblies.**

DIGITAL PANEL METERS

The new DP400 Series measures DC voltage accurately (.05% ±½ count) with up to 4000 count resolution. Using revolutionary encoding techniques, it offers 8 voltage ranges (200 mV to 400 V) with internally selectable decimal point position. Temperature coefficient is .005%/°F and the operating temperature range is 30° to 140° F. DP400 Series is available in quantity orders for measuring current and resistance.

ANALOG OUTPUT SYSTEM

The AOS 700 Series Analog Output System provides complete analog output capability at the lowest available cost. The system is offered in several convenient basic configurations from a simple 1 to 16 channel package that includes power supplies, to a full output system including complete interfacing logic for direct compatibility with several popular digital computers. All digital inputs are compatible with TTL and DTL logic levels.

PM700 SERIES DC POWER SUPPLIES

The PM700 Series of regulated, dual and single output DC power supplies has output voltage and current ranges from 4.8 VDC @ 0-3 Amps to 180 VDC @ 40 mA. Popular models are 5, 6, 12, 15 and 180 VDC. These rugged, open-construction units are compact and designed to meet requirements for higher power output than is offered in the PM400, PM500 and PM600 Series. The PM728 is one of the leading digital logic power supplies currently available. Its output is adjustable from 4.8 to 6.3 VDC @ 0-3 Amps.

PULSE GENERATORS

The PG610 Pulse Generator is an inexpensive, self-contained, versatile, compact instrument. WIDE FREQUENCY RANGE — 10 Hz to 4 MHz in 6 overlapping ranges. Compatible with TTL, DTL and RTL. High output duty cycle capability. Short circuit protected. Integral regulated power supply. Rise/fall time typically 15 ns. Case size — 2.0" x 3.75" x 6.25". Reparable.

A-TO-D CONVERTERS

The AD800 Series Analog-to-Digital Converters provide an extremely economical approach to a wide variety of encoding applications. Using the proven successive approximation method of encoding, in addition to the use of integrated circuit ladder switches, the AD800 Series is further modernized by extensive use of both linear and digital integrated circuits. Complex arrays dramatically reduce the component count for highest reliability.

Models are offered with binary or BCD output, word lengths from 6 to 16 bits and conversion word rates to 100 KHz, dependent upon accuracy requirements and accessory configurations.

D-TO-A CONVERTERS

The DA025 and DA035 Series offers an inexpensive approach to superior D/A performance. The DA025 Series provides 8, 10 or 12-bit binary resolution on a P.C. card. Inputs are TTL and DTL compatible. Six analog output ranges up to ±10.24 volts at 10 mA are available. Conversion rates up to 200 KHz are possible for incremental input data. The DA035 Series is similar to the DA025 and includes input data storage. Full scale settling time is less than 50 μ secs. for both the DA025 and DA035.

Why does the best-selling digital printer sell for $335?

Because Victor sells so many of them.

The Victor Imperial digital printer does superbly what any top-quality serial entry printer does. For less money. Because we sell so many.

It prints 8 column figures from remote sources on either 24 or 48 volt solenoids. Addition and subtraction for just $50 more. Ten column capacity? Add $20. Victor's exclusive printing press action reduces wear (and extra parts), and assures legibility and long, long life, under the roughest use.

OEM and quantity discounts available, with factory-trained service representatives covering every county in the U.S.

Does craftsmanship combined with volume manufacturing economies sell digital printers?

The most. **VICTOR**

Advanced digital printer

This newly-designed printer provides sophisticated performance at an unusually low price.

Model 5103 accepts 4-line BCD codes and prints up to 21 columns as fast as three lines per second. Options include built-in clock for time print-out, and selectable input code: 8-4-2-1 or 4-2-2-1 or 2-4-2-1.

The printer will accept data from two sources, printing each on the same or separate lines. Reliability is enhanced by permanently lubricated ball bearings and a continuously rotating print drum that eliminates the wear caused by start-stop mechanisms.

Print-out may be on pressure-sensitive paper or in ink with remote selection of black or red characters.

Price is $995 for basic 5-digit printer, and the design facilitates later expansion in the field.

DPD–6	3 digit	0–10.00V	DPR–3	Cable B	660.00
DPD–7	3 digit	Current	DPR–3	Cable B	630.00

FUNCTION:
To control the output level (voltage or current) of a d-c Power Supply by means of digitally encoded commands.
OUTPUT RANGE: Each DPD will program 10% overrange and when using the voltage control board has three selectable decimal levels. The largest is shown in the chart; e.g., Model DPD–1, a 4 digit overranging instrument will program: 0–10.999 volts, 0–109.99 volts and 0–1099.9 volts. The DPD–7, a three-digit instrument for the control of current has two selectable decimal levels. A current code board, compatible with the *current rating* of the power supply being controlled, is needed with the DPD–7. Specify the *current code board* when ordering by appending a suffix number to the model equal to the *ampere* rating of the supply being controlled. Specify Model DPD–7–22A for an instrument to control a 22 ampere power supply. The *current code board* in Model DPD–7 causes the programmed current to correspond to the numerical display of the companion DPR–3 Register.
DESCRIPTION: The DPD's use transistor-driven reed relays to actuate resistors in a 1–2–4–8 BCD code. The input is parallel (RTL) logic levels or switch closures; the output a four-wire resistance and control current command capable of programming any Kepco Operationally Programmable Power Supplies. The DPD's may be driven by the suitable companion DPR which provides serial-parallel conversion, data storage and display.
TIMING: Commands to the DPD are sequenced: hold—execute—program, requiring a 10 millisecond sequence time. This sequencing is provided by the DPR when used together.
INPUT: logic "0" is 0 to 0.3V d-c
logic "1" is 1 to 3V d-c
input impedance: 3K ohms
POWER REQUIREMENTS:
115V ±10V a-c or 230V ±20V a-c, 50-440 Hz single phase
DIMENSIONS: Half-rack: 5¼" H x 8-11/32" W x 13⅜" D
Rack adapter (Model RA-24) is available)

CABLES: Connect DPK–1 to any DPR via a cable "A"

FUNCTION:
The DPR accepts serial BCD or decimal coded programming signals, stores them and provides a parallel output signal to the DPD decade.
DESCRIPTION:
DPR processes incoming serial data into storage/display registers including a segmented numeric readout. The data is presented in parallel, continuous form to a DPD Programmer. The DPR also processes index and decimal point commands from a keyboard or machine input.
INPUT: Decimal — 10 lines
BCD — 5 lines including data pulse
Range selection (decimal point) — 3 lines;
Function command — 5 lines
Logic levels: "0" is 0 to 0.3V d-c; "1" is 1 to 3V d-c.
OUTPUTS: To DPD: parallel data.
To Printer (optional): parallel logic levels.
Print signal: 150 ohms output impedance.
Print complete signal: 1000 ohms input impedance.
POWER REQUIREMENTS:
115V ±10V ac or 230 ±20V ac, 50-440 Hz single phase.

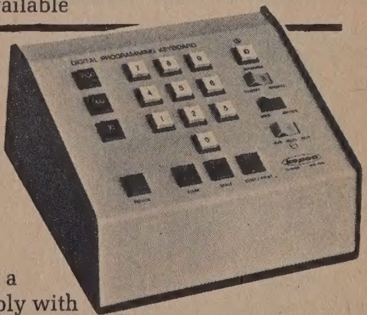
Model DPK-1 DIGITAL PROGRAMMING KEYBOARD



PRICE: $230.00

FUNCTION:
To control the output of a regulated d-c Power Supply with an adding machine keyboard, through a DPR logic and DPD analog converter. DPK-1 is a manual input — in serial form — for the DPR registers.
DESCRIPTION:
The DPK-1 uses SPDT keys to generate decimal code and register control signals, which are shaped and processed for delivery to the DPR storage register. Model DPK-1 will program registers DPR-3, DPR-4 and DPR-5
COMMANDS:
10 digit decimal signals, 3 ranges, Space, Clear, Start/Print, Index, Hold/Advance, Standby/Operate, Preview, Polarity.
POWER: Supplied from DPR.
Rack adapter (Model RA 19-1) available.

KEPCO
OVER-VOLTAGE / OVER-CURRENT PROTECTORS

MODEL	DESCRIPTION	PRICE	SHIP. WGT. (LBS.)
VIP–1	Overvoltage/Overcurrent	**$132.00**	21
VIP–3	Over and Undervoltage/ Over and Undercurrent	**237.00**	21
VIP–4	200 ampere Overvoltage crowbar (5–50V)	**310.00**	21

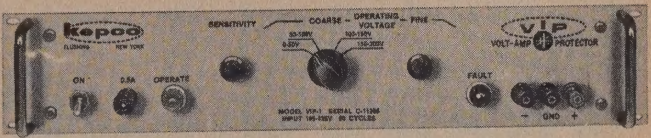
The VIP consists of a sensing circuit capable of detecting a voltage 1% or 0.1 volts different than any preset voltage limit in the range 5—200*volts. Should such an over or under-voltage occur, a fast-acting silicon controlled rectifier (SCR) "crowbar" short circuits the power supply's output within 50 microseconds. Simultaneously a power interlock relay is tripped which removes the primary a-c power within approximately 50 milliseconds. The SCR discharges the power supply's output filter capacitor and the voltage is reduced to zero.

Operation in the internal reference mode allows the operator to pre-set any voltage as a limit above or below which crowbar/turn-off action is precipitated. In its tracking mode, the VIP is interconnected with the voltage control circuit of the power supply with which it is used and will sense a voltage differential between the output of the supply and the programmed voltage.

Terminals are provided for the addition of a sensing resistor to convert VIP into an over-current or undercurrent protector depending on model. The current sensing resistor is chosen to drop 1 volt at the operating current. The sensitivity control then adjusts the firing threshold from 0 to the operating current, maximum 30 amperes.

*Model VIP-4 voltage range is 5-50V.

All terms used in the specifications are defined in the Kepco Glossary.



SPECIFICATIONS:

VOLTAGE
SENSITIVITY: Minimum threshold 1% of operating voltage or 0.1 volts whichever is greater (adjustable).
RANGE: 0–50V*, 50–100V, 100–150V, 150–200V.
*Minimum voltage required for proper operation is 5V.

CURRENT
SENSITIVITY: 5% of operating current producing a 1 volt drop across external sensing resistor.

RANGE: 0-30 amperes. Model VIP 4 has a 0-200 ampere crowbar range.

POWER INTERLOCK RELAY
CONTACT RATING: 10 amperes at 115V a-c.
Operation of the VIP is in two stages. The output crowbar is immediately followed by an a-c power interruption to the crowbarred power supply. High power supplies (such as might require a VIP 4) may require either an auxiliary contactor to turn them off, or, in the case of the large KS and KO models, a connection may be made to the trip coil of the power supply's circuit breaker to accomplish the turn-off action.

DIMENSIONS
3½″ high x 19″ wide x 8″ deep.
Standard EIA rack dimensions.

FINISH: Light gray, color 26440, per Fed. Std. 595

NOTE: When a VIP is to be used in its "Tracking Mode" be sure to specify (when ordering) whether it is to be used with a *plus* common or *minus* common power supply.

TAPE WINDER *MODEL KTW*

Transfers 0.25″, 0.5″ or 1.0″ tape at constant tension from a standard 10.5″ or 14″ reel to a customer's special-purpose hub. Constant and high tension is particularly important for tape packs used in a vibration or shock environment where layer-to-layer tape slippage can cause a recorder malfunction. Tape packs also have less than 0.5 mils layer-to-layer edge variation. This assures optimum tape guidance, minimum flutter and dynamic skew.

Winder is designed to accommodate almost any take-up hub or reel. Constant tension wind is provided by a tension arm and servo system — 16 oz. for 1.0″ tape, 8 oz. for 0.5″ tape and 4 oz. for 0.25″ tape. Winding speed is ≈50 ips. Winder incorporates tape footage counter and automatic control for stopping when pre-set length has been wound. Guides for all tape widths (0.25″, 0.5″ & 1.0″) are supplied as standard. Cabinet dimensions: 33.5″ H x 22″ W x 17″ D. Power: 115V ±10%, 60 Hz, 1 Ph at 1.5A. Weight ≈145 lbs.

GROUND PLAYBACK STATION *MODEL GSH*

In some applications it is desirable to use a Kinelogic recorder in the same manner as a tape magazine or cartridge (i.e., the recorder is removed from test vehicle and without removing cover or tape, is inserted in a Playback Station to reproduce recorded data. This technique is particularly appropriate where untrained personnel must be employed to handle the equipment. It is also advantageous in dusty or humid environments since the equipment does not have to be opened for playback.

Standard input logic level: Logical "0" is 0 volts, Logical "1" is +6 volts — Input Clock Mark: change in voltage level (+6 to 0 or 0 to +6 volts) — Other logic levels available. Input Z (data or clock): "1" input — Input signal must supply max. 10 ma. "0" input — Input signal must sink min. of 1.27 ma. Max. data rate: 30 Kbps. Power consumption ≈2.25 watts.

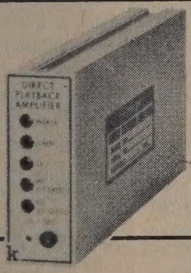
FM RECORD AMPLIFIER *MODEL EFR*

Input sensitivity: 0.5 to 4 Volts peak for ±40% dev. — Input Z: 100K ohms, unbalanced. Center freq: Most IRIG Freq. available — DC linearity: ±0.25% from best straight line — Worst case combination of Temperature Power Input Variation, and 8 Hour Drift results in a freq. dev. less than 3% of the full bandwidth — Power Consumption: ≈2W

DIRECT RECORD AMPLIFIER *MODEL EAR*

Data Input Sensitivity: 0.1 to 1.5 volts rms — Input Z: 100 k ohms, unbalanced — Freq. Response ±1 db (constant current): 100 Hz to 128 KHz — Total Harmonic Distortion: Less than 0.3% — Output Amplitude Stability: ±0.5 db — Precision Reference Signal and Bias Inputs are also provided. Amplifier designed to use 750 KHz bias. Power Consumption: ≈ 1.2 watts

PLAYBACK



DIGITAL PLAYBACK AMPLIFIER *MODEL EDP*

Amplifier employs peak detection which reduces pulse jitter during play to a minimum. Triggering in the reconstruct amplifier section is essentially independent of input signal amplitude. Output is NRZ (mark). Logical "0" is no change in voltage level: or vice versa. Max. bit rate: 30 Kbps. Output Z < 100 ohms. Amplifiers will handle 6 tape speeds with front panel switch (manual). Power consumption ≈1 watt.

FM PLAYBACK AMPLIFIER *MODEL EFP*

Available for any std. IRIG Center Frequency — Amplifiers having a Frequency Response which complies with either Low Band or Intermediate Band IRIG Specifications are available — Linearity: ±0.25 of best straight line for full bandwidth output — Total rms Harmonic Distortion: Less than 0.5% — Output Z < 100 ohms — Output Level: 0 to ±1.4 volts peak. Power Consumption ≈ 1 watt

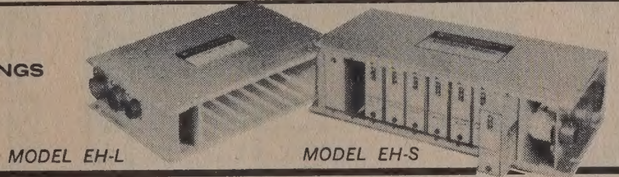
DIRECT PLAYBACK AMPLIFIER *MODEL EAP*

Amplifiers having Output Characteristics complying with either the Low Band or Intermediate Band IRIG Specification are available. Normal Output Level: 1 volt rms — Output Z: less than 100 ohms — Total RMS Harmonic Distortion: less than 0.5% — Both Amplitude and Phase Equalization for 1 or 2 tape speeds are available. Power Consumption ≈ 1 watt

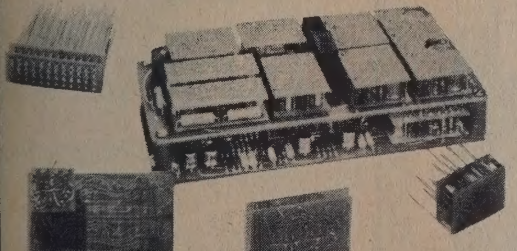
ELECTRONICS HOUSINGS

EH-S 9.312″ x 2.437″ x 4.125″

EH-L 9.312″ x 2.437″ x 6.125″



Housing wired to accept any combination of 9 Kinelogic Amplifiers — Model EH-S for record modules, Model EH-L for playback amplifiers. Available with thermostatically controlled heaters to extend operation of Kinelogic Electronics from −20°C to −54°C.



SPACE ELECTRONICS

Kinelogic data and control electronics for space use are tailored for each individual application. The electronics are adaptions of a special group of circuits, designed and developed by Kinelogic to minimize size, weight, and power consumption, and also to meet the highest reliability standards. Cordwood and other condensed packaging techniques are employed for fabrication of hybrid modules (combination of IC and discrete components) which in turn are mounted on multi-layer "mother" boards. This approach minimizes interconnecting wiring. Fabrication is to NASA standards with assembly and soldering accomplished by NASA certified personnel in a "clean" environment.

Available circuits include digital, (NRZ and Bi-phase) direct, and FM record and playback amplifiers plus head track switching logic, inverters, control logic, power supplies, etc. Typical characteristics of a single channel of data electronics are shown in the Table.

	Digital		Direct		FM	
Characteristics	Rec.	P/B	Rec.	P/B	Rec.	P/B
Size (cubic inches)*	0.7	1.5	1.3	1.3	1.0	2.0
Weight (oz)*	0.3	0.8	0.8	1.3	0.5	2.0
Power Consumption (Milliwatts)	100	180	100	50	100	160

*The size and weight of the interconnecting "mother" board must be added to the above numbers in order to estimate system values.

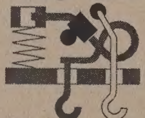
*Wedge-Action



The moving contacts are mounted between two stationary contacts. On actuation, they drive into the stationary contacts, creating high pressures and low contact resistance at all current levels. In addition, wedge-action contact wipe provides self-cleaning of the precious-metal contacts.

Double Coil MAGNETIC LATCHING Series LD RELAYS
only $2.49 EACH
(IN LOTS OF 5,000)

Printact®

Plugs into your PC board... mates with plated conductors

Where **memory without power** is a requirement in the design of control circuitry, the use of the "LD" relay results in a **compact-low cost module.** Reliability is assured by the unique design which includes, as standard, many features not generally available in commercial relays.

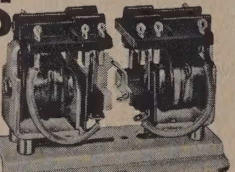
Encapsulated coil, bifurcated gold or palladium contacts, low thermal EMF, plug-in without sockets or soldering, low bounce and chatter, series-break switching eliminates pigtails, permanent magnet avoids return spring and mechanical linkage—all of which assures continuous performance for many millions of cycles.

Available with 6, 12 or 24 VDC 1 watt coil (AC operation with series diode) in 2, 3 and 4 pole configuration. Series break swingers permit each pair of fixed contacts to be etched with common (Form C) or isolated (Form A plus Form B) switching between make and break circuits.

For data write or call 212-EX 2-4800.

Printact Relay Division, Executone, Inc., Box 1430, Long Island City, N.Y. 11101

P&B LATCHING RELAYS



KB SERIES RELAY

The KB is one of many latching relays available from P&B. One coil operates relay to set latch and the other coil releases it. Ideal for memory applications. Operates on momentary pulse to either coil. Listed by U/L and Canadian Standards Association.

Also available with dust cover as KBP Series, furnished with 20-pin octal plug for socket mounting.

For complete specifications on latching and many other relay types, send for Catalog 68.

P&B MERCURY-WETTED RELAYS

JMF SERIES

DELIVER BILLIONS OF HIGH SPEED, BOUNCE-FREE OPERATIONS.

The new JMF modules have a very low profile for PC board mounting and are compatible with solid state circuits.

All versions, the JML and JMC with non-bridging contacts and the JMP polarized series for single-side-stable, bi-stable and chopper operations, as well as the JM's with from SPDT to 4PDT bridging contacts, are available.

Write for the P&B Mercury-Wetted Contact Relay Catalog. It explains the extreme longevity, high speed and unvarying dependability you can expect from these relays.

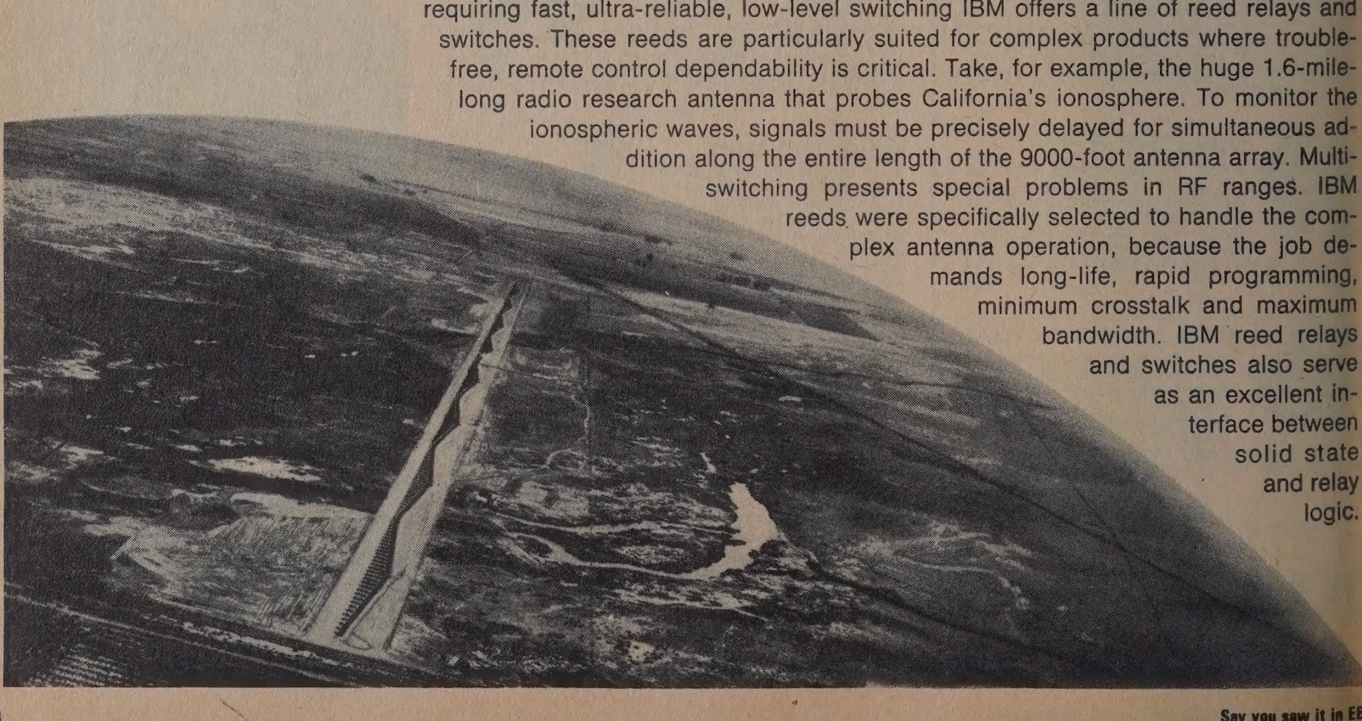
Some new switching applications for IBM relays you may want to think about.

IBM relays reduce size and cost of elevator control switching. IBM relays now help elevator manufacturers reduce the size of increasingly complex control systems without sacrificing reliability. Because IBM's long-life wire contact relays allow very dense packaging, manufacturers can cut elevator control unit size by over 75%. This also means substantial production savings plus economies in shipping and installation. IBM relays cost less per contact and their multi-pole design reduces the number of relays needed. Further flexibility is provided by the relay's plug-in insertion and taper-pin wiring of receptacles which allow for expansion. Long life, ease of maintenance as well as compact pluggability make IBM relays an ideal solution to new elevator control system design.

IBM reeds deliver high reliability in switching low-level RF signals. For applications requiring fast, ultra-reliable, low-level switching IBM offers a line of reed relays and switches. These reeds are particularly suited for complex products where trouble-free, remote control dependability is critical. Take, for example, the huge 1.6-mile-long radio research antenna that probes California's ionosphere. To monitor the ionospheric waves, signals must be precisely delayed for simultaneous addition along the entire length of the 9000-foot antenna array. Multi-switching presents special problems in RF ranges. IBM reeds were specifically selected to handle the complex antenna operation, because the job demands long-life, rapid programming, minimum crosstalk and maximum bandwidth. IBM reed relays and switches also serve as an excellent interface between solid state and relay logic.



IBM relays give trouble-free, flexible packaging system for audio switching. A typical audio and/or control switching application handled by IBM relays is a major city's police department communications center. This police nerve center takes all ncoming citizens calls, displays patrol car deployment, then dispatches assistance as required. Basic elements of the system are IBM wire contact relays, which after more than 10,000 hours of continuous duty have proven 100% reliable. This is expected, however, since IBM relays offer normal ife of 200-million-plus operations. The relays are in critical circuits where overall operation of the system is affected. Since the same IBM relay handles both an audio function and a control (DC) mode circuit, design and service are also greatly simplified. The dual-purpose single component also speeds access for any diagnostic analysis of the switching modules.

IBM components help solve control switching problems. IBM offers a wide range of switching componentry and associated packaging hardware for a variety of design problems. These products cover all sorts of unexpected design applications from communications centers to automatic elevators, baggage information displays to gigantic electric signs. Time-tested and field-proven, IBM components deliver ultra-long-life, compact packaging and significant cost savings.

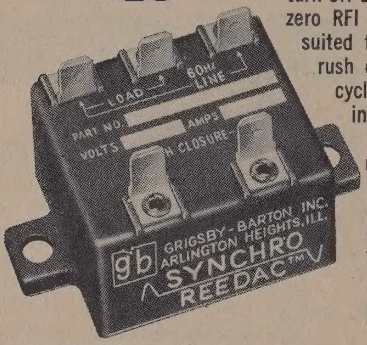
When you think TRIACS
THINK REEDACS*

Reedacs incorporate solid state switching components based on Triac capabilities, and are specifically designed for inductive, tungsten or resistive loads rated up to 30 AMPS and 240 VRMS. Inputs are switch closure, AC or DC pulse, DC or transistor logic. Inrush load is 10 times rating.

TRIAC
REEDAC

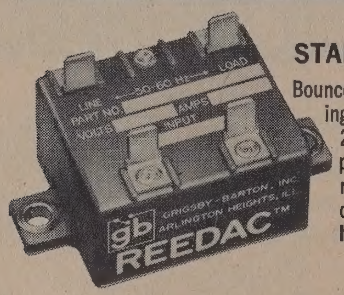
SYNCHRONOUS REEDAC

Solid state switching device has a rating of 4, 7, 10, 15 and 30 Amps at 120 or 240 VRMS. Input is any switch closure, DC pulse, or 5 VDC logic. Turn on occurs at less than 4V, and turn off at current zero, thus insuring virtually zero RFI and meeting MIL-STD 826A. Ideally suited for inductive or capactive loads. Inrush capability 10 times its rating for 1 cycle. Boasts compact rugged nylon housing, with quick connect, screw or solder type terminals (alternate: octal plug mounting). Also includes RC network to minimize commutating DV/DT to 10V per microsecond. **No minimum load current. Typical applications: Tungsten lamp loads, control motors and solonoids, interface with DTL logic, capacitive loads.**



STANDARD REEDAC

Bounceless semi-solid-state device has a rating of 4, 7, 10, 15 and 30 Amps at 120 or 240 VRMS. Input: Any switch closure, DC pulse, or 5 VDC logic. Turn on occurs randomly throughout the sine wave, turn off at current zero. **Designed for general heavy duty applications.**



GB4200 REEDAC

Medium power static relay, **designed for PC board assembly**, is rated at 1½ Amps 120 VRMS. Compact package — approximately ¾ cubic inches—features high reliability, high speed operation. Input: Switch closure, DC pulse, 5 VDC logic. Accepts inrush of 12 Amps.

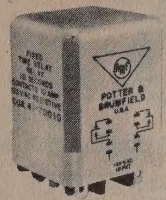
P&B SOLID STATE TIME DELAY RELAYS



CU RELAY

as low as

$12.50

Three separate series of solid state time delay controls are available, the CD series, the CH series, and the CU series. The differences between the three types consist in their degree of accuracy, the variety available in each series, and their cost.

CD SERIES Remarkably dependable, accurate and flexible, the CD series offers an unusually wide selection of operational configurations, all with accurate time delay values, fast reset time and excellent repeatability. It is available in two types: Knob-adjustable in two versions, one with the relay in the same enclosure as the solid state unit, the other with an auxiliary relay. A second type is adjustable with an external resistor. The CD series is available for time delay on operate or on release.

CH SERIES The CH series is intended for a wide range of industrial applications where economy is of greater interest than highly critical performance. It is available in two types: Knob-adjustable with the relay in the same enclosure as the solid state unit. The second type has a fixed time delay period that is set at the factory and cannot be modified; its case has no knob. The CH series is available for time delay on operate and on release.

CU SERIES An outstanding value in a solid state time delay relay at low cost. Available in two types: Fixed time delay and adjustable with an external resistor. The CU series is offered with delay on operate only.

COMPARISON OF SPECIFICATIONS OF CD WITH CH AND CU SERIES

TYPE	DIAL SETTING	ACCURACY OR TOLERANCE	RESET TIME	REPEATABILITY
CD	Time, calibrated ±5% of full scale	±5% of nominal	60 Milliseconds	±1%

(E-I has the know-how!)

Specify E-I Sealed Terminations for Unusual Service Applications!

How does E. I. produce a quality line of hermetic seals? The answer is simple. A stringent program of testing and control! Above is shown an optical comparator being utilized to measure wire terminals for use in a hermetic seal. Testing in this manner assures that the finished hermetic seal will comply with all your requirements.

Available in thousands of standard types, E-I seals can be produced in 'specials' to meet particular component or equipment requirements.

Technical literature edited for the engineer/designer/specifier, and containing complete data and information, is available on request.

ENGINEERING FACTS AND FIGURES

Construction—Chassis-Trak Slides are made of hard, cold-rolled steel for maximum strength and wearing qualities and are cadmium-plated for extra corrosion resistance. Smooth operation is achieved by means of Poxylube 75 dry film lubricant which becomes increasingly slick with use. This permanent formulation is dust-repellent and withstands pressure loading of more than 50,000 psi at 25 ft./min. Finish has passed JAN 100-hour salt spray test and is approved for military use.

Installation—"Pencil thin" Chassis-Trak design permits installation of standard 17" chassis in standard 19" panel racks without modification. Standard slides bolt to front rail and rear of cabinet. On most models, a prefabricated gusset assembly can be furnished for use where load does not exceed 100 lbs. Gusset automatically aligns slides and permits mounting at front rail only. Templates, rear mounting brackets and all hardware furnished together with complete assembly instructions.

Operation—Chassis-Trak Slides are available in non-tilt, tilt, and tilt-detent models. Slides with "B" in the model designation tilt upward only; "D" models tilt and lock in seven different service postions. Choice of solid bearing or roller bearing operation. Roller bearings are recommended for equipment requiring frequent service. Chassis of any length can be fully extended without disconnecting rear cables. Pushbutton spring mechanism releases chassis for convenient slip-out, slip-in servicing.

Skip-free core solder.

Nobody makes it like Dutch Boy.®

Try our single-core solder, or four-core "Fluxrite" solder. You'll find no better way of applying solder and flux to the exact ratio you want, at the exact speed your operation requires — even for the most critical applications. Dutch Boy rosin core solders are available with a variety of non-corrosive, non-conductive fluxes to meet your specific needs.

Skip-free core solders are just part of National Lead's complete product range: select from pig, slab, bar, sheet, ribbon, wire, drop or pulverized solder; corrosive, intermediate, non-corrosive or activated rosin fluxes — in liquid or paste form.

More information? We have two informative brochures for you: "Solders and Fluxes for the Electronics Industry" and "Soldering Technology and Technical Data." Just write National Lead Company, Room 5304, 111 Broadway, New York, N.Y. 10006. Additional information and service available in major cities throughout the country.

When it comes to solder and flux, nobody makes it like Dutch Boy.

The Material of Unlimited Uses...

SOLDERING "UNSOLDERABLES"

...is but one of the thousands of uses for advanced low-melting-temperature alloys such as Cerroseal® 35. Cerroseal 35 melts between 238° and 260° F., and can be used with ordinary soldering techniques. When soldered with this versatile alloy, "toughies" such as glass-to-metal, ceramic-to-metal and metal-to-metal seals stay tight even in a deep vacuum. Other Cerro® Alloys, including specials made to your individual specs, are perfect for joining ultra-delicate parts like integrated circuits which cannot be heat-sinked during soldering. Low-temperature soldering as cool as 117° F. can also be accomplished with certain Cerro Alloys.

For detailed information contact Cerro Alloy Dept., Cerro Copper & Brass Company, Stamford, Conn. 06907...R. S. Darnell (203) 327-0550.

In Europe, contact Mining & Chemical Products Ltd., Alperton, Wembley, Middlesex, England.

Standards Voltage DC

Fluke Precision Voltage/Current Calibrators

The new Fluke 3330A Programmable Constant Current/Voltage Calibrator is the ideal instrument to calibrate and test precision instruments, semiconductors, resistors and sub-assemblies. It can be operated in either a constant current or constant voltage mode. In the voltage mode, range is 0 to 1000 volts with 10% overranging in three ranges. Output current is 100 ma in the 10 and 100 v ranges and 50 ma in the 1000 v range. In the constant current mode, ranges are 0 to 100 ma in three ranges with 10% overranging. Compliance voltage is 1000 volts on the 1 and 10 ma ranges and 500 volts on the 100 ma range.

Programmable functions are output range, mode, level and polarity, voltage and current limit, crowbar, and standby/operate. Programming time is tens of milliseconds. Price is $2995.

Two DC calibrators, Models 341 and 343, are also new to the Fluke line. Their specifications will cost you up to 50% more elsewhere. The "best buy" Model 341A offers an accuracy of ±0.01% over a 10°C range for $1195. The Model 343A features a resolution of 0.1 ppm—equal to the most expensive instrument on the market—in only 3½" cabinet space. Output is within 25 ppm 5 seconds after any range or setting change. Current is automatically limited at any preset level between 1 and 30 ma. Four-terminal floating output is featured.

Fluke Model 760A Meter Calibrator

The Model 760A Meter Calibrator calibrates AC/DC, volt or ammeters directly in terms of percent error. This calibration standards instrument is guaranteed to stay within specifications for one full year over a wide range of environmental conditions.

A minimum number of controls and indicators simplify and speed operation of the instrument. You can dial up any parameter without range changing or switching. Interlocks and other safety features prevent damage to the instrument under test or harm to the user. A stable, low frequency oscillator is used to provide either 60 Hz or 400 Hz. Optional features include fractional scale division, high output, and external oscillator operation.

Brief specifications:

Voltage Range:
0.001 to 1000 volts.

DC Accuracy:
±0.1% to 1000 volts.

AC Accuracy:
±0.25% to 1000 volts.

Current Range:
1 microampere to 10 amperes.

Accuracy:
±0.25%.

Resistance Range:
0 to 10 megohms.

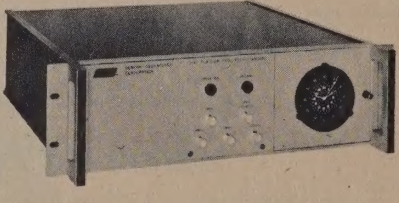
RUBIDIUM FREQUENCY
STANDARDS



Model 304D
Rubidium Frequency Standard is accurate, stable, compact, and rugged. For use in timing, standards laboratories, navigation systems, missile and satellite tracking and communication systems. Synthesizer translates atomic resonance frequency to outputs at standard frequencies. Time scale selector permits switch selection of output time scale to accommodate future changes in UT2 and to select A1 or UT2. Initial frequency setting of ± 5 X 10^{-11} relative to customer prescribed frequency or time scale (± 2 X 10^{-11} if set at the National Bureau of Standards). Drift Rate < 1 X 10^{-11}/month. Optional clock delay module and integral standby power.

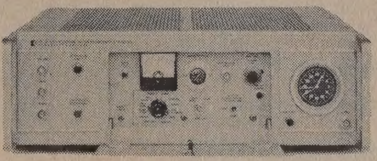
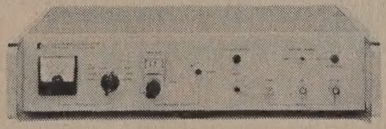
5061A

Cesium Beam Atomic Standard, Model 5061A. The reliability of this portable primary standard has been proven by more than 5.5 million field operation hours. Warranty is now increased to 3 years. Accuracy: $\pm 1 \times 10^{-11}$ including effects of 0° to 50° C ambient temperature and magnetic fields to 2 gauss. Long term stability: $\pm 5 \times 10^{-12}$ over cesium beam tube life (3 year warranty). 5/1/0.1 MHz outputs. Clock pulse jitter < 5 ns. History includes on-line performance in critical applications such as Loran-C Navigation, Omega Navigation, Apollo Timing. Met 400 lb. hammer blow test of MIL-S-901C with slight modification. Price: $14,800 as a frequency standard; add $1500 for built-in clock.



5065A

Rubidium Atomic Standard, Model 5065A. Sets a new mark for short-term stability (rms) in rubidium frequency standards: $< 7 \times 10^{-12}$, 1 s avg; $< 2.2 \times 10^{-12}$, 10 s avg; $< 7 \times 10^{-13}$, 100 s avg-verified against HP hydrogen maser. Long term stability: $< 2 \times 10^{-11}$/month. Built-in synthesizer for time scale change. Signal-noise ratio > 87 dB. 5/1/0.1 MHz outputs. Portable (37 lbs). Price: $7500; add $1500 for built-in clock.



105B

Quartz Oscillator, Model 105B. Compact (3½" high), lightweight (16 lbs), precision frequency standard with 5/1/0.1 MHz outputs. Aging rate 5×10^{-10}/24 hrs. Output change $< 2 \times 10^{-11}$ from open to short circuit. Short term stability: $< 1 \times 10^{-11}$ rms, 1 s avg. S/N > 90 db. Rapid warm-up. Phase locking capability. Price: $1500.

VLF Comparator, Model 117A. Provides phase plot of your 100 kHz standard against standard 60 kHz signal from U.S. NBS Station WWVB. Overall phase stability $\pm 1 \mu s$. Price: $1400 includes loop antenna with preamp.

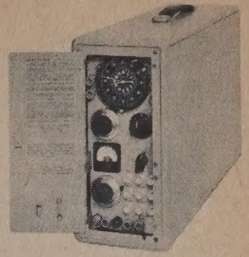
SULZER CRYSTAL CLOCKS



Model A5 generates precise time references (10^{-10}) under extreme environmental conditions. Choice of internal oscillator determines characteristics: D5 has excellent frequency stability over wide temperature range; D2.5 provides even higher frequency stability. Pulse outputs down to 1 per second; sine wave outputs at 5, 1.0 and 0.1 MHz and 10 kHz; Mechanical register indicates elapsed time in hrs., mins., seconds. Typical time lost or gained during first 24 hours is 2 micro-seconds.

Here's A Switch

Fast Response . . . No Bounce

Actual size —
2 miniature models available.

The MERCUTRON SWITCH effectively combines the mechanical advantages of a snap-action switch with the electrical properties of a mercury switch. It is a miniature switch of unique and simple design relying on mercury movement in a flexible sealed tube for fast response with no bounce, perfect for direct switching of solid state circuits. Actuating a plunger simultaneously releases a pinch in the tube and "pumps" the divided mercury together to close the normally open circuit. A simple cricket spring in direct contact with the tube provides the snap-action.

Switching Capacity	60 ma @ 24 VDC
Contact Rise Time	$< 1 \times 10^{-9}$ seconds
AC Contact Noise	10 Microvolts
Bounce Time	Zero
Maximum Cycling Rate	200 Hz
Life at Rated Load	$.5 \times 10^6$ cycles
Operating Temperature Limits	—30°C to 60°C
Shock Resistance	30 G's min.

Cunningham Switches

3 reasons for superiority

1. Since we make nothing but switches, we have to make the finest to stay in business.

2. To stay ahead, we innovate, with such products as our unique Hystareed^{T.M.} Magnetic Latching Relay that operates without biasing magnets or holding current.

3. To stay on top, we make full lines of reed matrices, cross-bar switches, and OHS (Ordinate Holding Switches) for the complete range of high-frequency communication, data acquisition, and logic control requirements.
